Understanding Map Projections:

Understanding Map Projections Melita Kennedy, Steve Kopp, 2000
primary projected coordinate systems which can be used with ArcGIS

ArcGIS 9, 2004 Includes brief discussion of the
Working with Map Projections Fritz Kessler, Sarah Battersby, 2019-05-03 A map projection fundamentally impacts the mapmaking process Working with Map Projections A Guide to Their Selection explains why for any given map there isn't a single best map projection Selecting a projection is a matter of understanding the compromises and consequences of showing a 3 D space in two dimensions The book presents a clear understanding of the processes necessary to make logical decisions on selecting an appropriate map projection for a given data set The authors discuss the logic needed in the selection process describe why certain decisions should be made and explain the consequences of any inappropriate decision made during the selection process This book also explains how the map projection will impact the map's ability to fulfill its purpose uses real world data sets as the basis for the selection of an appropriate map projection and provides illustrations of an appropriately and inappropriately selected map projection for a given data set The authors take a novel approach to discussing map projections by avoiding an extensive inventory of mathematical formulae and using only the mathematics of map projections that matter for many mapping tasks They also present information that is directly applicable to the process of selecting map projections and not tied to a specific software package Written by two leading experts this book is an invaluable resource for anyone studying or working with geospatial data from students to experienced professionals and will help readers successfully weigh the pros and cons of choosing one projection over another to suit a map's intended purpose

Choosing a Map Projection Miljenko Lapaine, E. Lynn Usery, 2017-04-04 This book offers a much needed critical approach to the intelligent use of the wide variety of map projections that are rapidly and inexpensively available today It also discusses the distortions that are immanent in any map projection A well chosen map projection is one in which extreme distortions are smaller than those in any other projection used to map the same area and in which the map properties match its purpose Written by leading experts in the field including W Tobler F C Kessler S E Battersby M P Finn K C Clarke V S Tikunov H Hargitai B Jenny and N Fran ula This book is designed for use by laymen The book editors are M Lapaine and E L Usery Chair and Vice Chair respectively of the ICA Commission on Map Projections for the period 2011 2015

The Routledge Handbook of Mapping and Cartography Alexander Kent, Peter Vujakovic, 2017-10-04 This new Handbook unites cartographic theory and praxis with the principles of cartographic design and their application It offers a critical appraisal of the current state of the art science and technology of map making in a convenient and well illustrated guide that will appeal to an international and multi disciplinary audience No single volume work in the field is comparable in terms of its accessibility currency and scope The Routledge Handbook of Mapping and Cartography draws on the wealth of new scholarship and practice in this emerging field from the latest conceptual developments in mapping and advances in map making technology to reflections on the role of maps in society It

brings together 43 engaging chapters on a diverse range of topics including the history of cartography map use and user issues cartographic design remote sensing volunteered geographic information VGI and map art The title s expert contributions are drawn from an international base of influential academics and leading practitioners with a view to informing theoretical development and best practice This new volume will provide the reader with an exceptionally wide ranging introduction to mapping and cartography and aim to inspire further engagement within this dynamic and exciting field The Routledge Handbook of Mapping and Cartography offers a unique reference point that will be of great interest and practical use to all map makers and students of geographic information science geography cultural studies and a range of related disciplines
