## NUMBER & CHARACTER

**Integer**  
 The integer data type represents whole numbers. It is the most basic of the numeric types. The range of values that can be stored in an integer depends on the implementation, but it is typically between -2,147,483,648 and 2,147,483,647. The integer type is used for counting, indexing, and other operations that require whole numbers.

**Float**  
 The float data type represents real numbers. It is used for calculations that require fractional values. The range of values that can be stored in a float is typically between -3.4e+38 and 3.4e+38. The float type is used for scientific calculations, financial calculations, and other operations that require fractional values.

**Double**  
 The double data type represents real numbers. It is used for calculations that require fractional values. The range of values that can be stored in a double is typically between -1.7e+308 and 1.7e+308. The double type is used for scientific calculations, financial calculations, and other operations that require fractional values.

**Character**  
 The character data type represents a single character. It is used for storing and manipulating individual characters. The range of values that can be stored in a character is typically between 0 and 255. The character type is used for string processing, file I/O, and other operations that require individual characters.

**String**  
 The string data type represents a sequence of characters. It is used for storing and manipulating text. The range of values that can be stored in a string is typically between 0 and 255. The string type is used for string processing, file I/O, and other operations that require text.

**Boolean**  
 The boolean data type represents a logical value. It is used for storing and manipulating true and false values. The range of values that can be stored in a boolean is typically between 0 and 1. The boolean type is used for conditional statements, loops, and other operations that require logical values.

**Operator**  
 The operator data type represents a mathematical or logical operation. It is used for performing calculations and logical operations. The range of values that can be stored in an operator is typically between 0 and 255. The operator type is used for arithmetic operations, logical operations, and other operations that require mathematical or logical values.

**Constant**  
 The constant data type represents a value that does not change. It is used for storing and manipulating values that are constant. The range of values that can be stored in a constant is typically between 0 and 255. The constant type is used for defining constants, global variables, and other operations that require constant values.

**Variable**  
 The variable data type represents a value that can change. It is used for storing and manipulating values that are variable. The range of values that can be stored in a variable is typically between 0 and 255. The variable type is used for defining variables, local variables, and other operations that require variable values.

**Array**  
 The array data type represents a collection of elements of the same type. It is used for storing and manipulating multiple values of the same type. The range of values that can be stored in an array is typically between 0 and 255. The array type is used for storing and manipulating multiple values of the same type.

**Structure**  
 The structure data type represents a collection of elements of different types. It is used for storing and manipulating multiple values of different types. The range of values that can be stored in a structure is typically between 0 and 255. The structure type is used for storing and manipulating multiple values of different types.

**Union**  
 The union data type represents a collection of elements of different types. It is used for storing and manipulating multiple values of different types. The range of values that can be stored in a union is typically between 0 and 255. The union type is used for storing and manipulating multiple values of different types.
