Atmospheric Nuclear Tests Charles S. Shapiro, 2013-06-29 Radionuclides produced by past nuclear weapon test explosions comprise the largest source of anthropogenic radioactivity released into the earth's atmosphere to date. This volume presents data and models about the fate of the released radionuclides and their possible effects on human health. It is divided into the following three parts: Source Term Studies, Dose Reconstruction, Ecological and Health Effects, and comprises both Western and formerly secret Soviet research studies, illuminates past and current research. **Film Badge Dosimetry in Atmospheric Nuclear Tests** National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Film Badge Dosimetry in Atmospheric Nuclear Tests, 1989-02-01. During the 18-year program of atmospheric testing of nuclear weapons, 1945-1962, some of the 225,000 participants were exposed to radiation. Many of these participants have been experiencing sicknesses that may be test-related. Currently, test participants who had served in military units have pending over 6,000 claims for compensation at the Department of Veterans Affairs. This study presents improved methods for calculating the radiation doses to which these individuals were exposed and are intended to be useful in the adjudication of their claims. **Federal Register**, 1992-04-08. *Catalog of Worldwide Nuclear Testing* Viktor Nikitovich Mikhailov, 1999. The Catalog of Worldwide Nuclear Testing is the first complete compilation of all nuclear tests. Containing vital information and data on all 2,049 nuclear tests conducted by the United States, the Soviet Union, the United Kingdom, France, and China, and recent tests in India and Pakistan, the Catalog presents a uniform classification analysis of the five nuclear weapon states, including dynamics, yield, and methods of testing. This volume has been compiled by a team of specialists from the Russian nuclear weapons establishment, headed by the former Minister of Atomic Energy of Russia, Victor Mikhailov, and including I. A. Andryushin, A. K. Chernyshev, R. I. Ilkaev, A. M. Matushchenko, L. D. Ryabev, V. G. Srukov, N. P. Voloshin, and Yu. A. Yudin. Distributed by Begell House Inc. for Begell Atom LLC. Yucca Mountain Site Characterization Project Bibliography, 1992-1993, 1994. Molecular Diagnosis and Epidemiology of Human Pathogens Wafa Achour, Ons Bouchami, Arabella Touati, 2023-12-13. Medical Microbiology deals with the study of microorganisms that colonize or infect humans. It studies the pathogenesis and epidemiology of these microorganisms with practical applications in diagnosis, treatment, and prevention of diseases: infectious diseases, infection-related cancer, dysbiosis-related diseases, etc. In the past two decades, its expansion is essentially due to the great advances in related fields such as immunology, genetics, bioinformatics, science, technology, engineering, and mathematics. New scientific knowledge and understanding make possible new applications. Nevertheless, it becomes a challenge due to lack of expertise to analyze fast-growing data and to translate them in clinical practice and medical education. The pace and sophistication of advances in all scientific disciplines applied to medical microbiology call for a comprehensive and integrative understanding of the overall knowledge development in the different related fields: immunology, genetics, bioinformatics, science, technology, engineering, and mathematics, etc. In light of

this the main goal of this topical collection is to bridge the gap between all these fields Each article in this compilation is a stand alone text based on an integrative review which highlights advances in molecular diagnosis and epidemiology of human pathogens It also helps researchers and practitioners to access and scrutinize the fast expanding knowledge This research topic in medical microbiology provides an updated core of basic knowledge critical to clinical practice in medicine It is designed for physicians researchers educators residents Lab technicians undergraduate and graduate students Each article deals with an important human pathogen It uses a multidisciplinary approach integrating new advances especially in genetics bioinformatics science technology engineering and mathematics It provides an update of the current state of the art scientific knowledge applied to molecular diagnosis and epidemiology of human pathogens Rapid detection accurate identification and typing of causative pathogens are necessary to optimize treatment to trace pathogens and to study microbial population dynamics
