11th International Symposium on Process Systems Engineering - PSE2012 ,2012-12-31 While the PSE community continues its focus on understanding synthesizing modeling designing simulating analyzing diagnosing operating controlling managing and optimizing a host of chemical and related industries using the systems approach the boundaries of PSE research have expanded considerably over the years While early PSE research was largely concerned with individual units and plants the current research spans wide ranges of scales in size molecules to processing units to plants to global multinational enterprises to global supply chain networks biological cells to ecological webs and time instantaneous molecular interactions to months of plant operation to years of strategic planning The changes and challenges brought about by increasing globalization and the the common global issues of energy sustainability and environment provide the motivation for the theme of PSE2012 Process Systems Engineering and Decision Support for the Flat World Each theme includes an invited chapter based on the plenary presentation by an eminent academic or industrial researcher Reports on the state of the art advances in the various fields of process systems engineering Addresses common global problems and the research being done to solve them Integrated Design and Simulation of Chemical Processes Alexandre C. Dimian,Costin Sorin Bildea,Anton A. Kiss,2014-09-18 This comprehensive work shows how to design and develop innovative optimal and sustainable chemical processes by applying the principles of process systems engineering leading to integrated sustainable processes with green attributes Generic systematic methods are employed supported by intensive use of computer simulation as a powerful tool for mastering the complexity of physical models New to the second edition are chapters on product design and batch processes with applications in specialty chemicals process intensification methods for designing compact equipment with high energetic efficiency plantwide control for managing the key factors affecting the plant dynamics and operation health safety and environment issues as well as sustainability analysis for achieving high environmental performance All chapters are completely rewritten or have been revised This new edition is suitable as teaching material for Chemical Process and Product Design courses for graduate MSc students being compatible with academic requirements world wide The inclusion of the newest design methods will be of great value to professional chemical engineers Systematic approach to developing innovative and sustainable chemical processes Presents generic principles of process simulation for analysis creation and assessment Emphasis on sustainable development for the future of process industries *Chemical Engineering Progress* ,2005 Government Reports Announcements & Index ,1981 **CAPE-OPEN Integration for Advanced Process Engineering Co-Simulation** S. E. Zitney,2006 This paper highlights the use of the CAPE OPEN CO standard interfaces in the Advanced Process Engineering Co Simulator APECS developed at the National Energy Technology Laboratory NETL The APECS system uses the CO unit operation thermodynamic and reaction interfaces to provide its plug and play co simulation capabilities including the integration of process simulation with computational fluid dynamics CFD

simulation APECS also relies heavily on the use of a CO COM CORBA bridge for running process CFD co simulations on multiple operating systems For process optimization in the face of multiple and some time conflicting objectives APECS offers stochastic modeling and multi objective optimization capabilities developed to comply with the CO software standard At NETL system analysts are applying APECS to a wide variety of advanced power generation systems ranging from small fuel cell systems to commercial scale power plants including the coal fired gasification based FutureGen power and hydrogen production plant
