A Student's Manual for A First Course in General Relativity Robert B. Scott, 2016-01-21 This comprehensive student manual has been designed to accompany the leading textbook by Bernard Schutz *A First Course in General Relativity* and uses detailed solutions cross referenced to several introductory and more advanced textbooks to enable self learners undergraduates and postgraduates to master general relativity through problem solving The perfect accompaniment to Schutz s textbook this manual guides the reader step by step through over 200 exercises with clear easy to follow derivations It provides detailed solutions to almost half of Schutz s exercises and includes 125 brand new supplementary problems that address the subtle points of each chapter It includes a comprehensive index and collects useful mathematical results such as transformation matrices and Christoffel symbols for commonly studied spacetimes in an appendix Supported by an online table categorising exercises a Maple worksheet and an instructors manual this text provides an invaluable resource for all students and instructors using Schutz s textbook

Computational Fluid Dynamics for Incompressible Flows D.G. Roychowdhury, 2020-08-20 This textbook covers fundamental and advanced concepts of computational fluid dynamics a powerful and essential tool for fluid flow analysis It discusses various governing equations used in the field their derivations and the physical and mathematical significance of partial differential equations and the boundary conditions It covers fundamental concepts of finite difference and finite volume methods for diffusion convection diffusion problems both for cartesian and non orthogonal grids The solution of algebraic equations arising due to finite difference and finite volume discretization are highlighted using direct and iterative methods Pedagogical features including solved problems and unsolved exercises are interspersed throughout the text for better understanding The textbook is primarily written for senior undergraduate and graduate students in the field of mechanical engineering and aerospace engineering for a course on computational fluid dynamics and heat transfer The textbook will be accompanied by teaching resources including a solution manual for the instructors Written clearly and with sufficient foundational background to strengthen fundamental knowledge of the topic Offers a detailed discussion of both finite difference and finite volume methods Discusses various higher order bounded convective schemes TVD discretisation schemes based on the flux limiter essential for a general purpose CFD computation Discusses algorithms connected with pressure linked equations for incompressible flow Covers turbulence modelling like k k SST k Reynolds Stress Transport models A separate chapter on best practice guidelines is included to help CFD practitioners

A First Course in Fluid Mechanics S. Narasimhan, 2007-07-27 A First Course in Fluid Mechanics is

primarily devoted to the application of the laws of Newtonian mechanics to solve complex problems in fluid motion The topics discussed include fluid properties and their role in fluid motion fluid statics fluid kinematics Euler's equations and Bernoulli's energy equation forms of irrotational flows property of viscosity and the Navier Stokes equations of motion turbulence A chapter on dimensional analysis and model similitude is included to emphasise the need for guided experimentation presentation of results in generalised forms and interpretation of results obtained on the model to the prototype
