

# ADDITION STRATEGIES

I can use a variety of strategies to add.

I can use my fingers.

$$4 + 2 = 6$$

I can make ten.

$$5 + 7$$

(5 + 5) + 2

$$5 + 7 = 12$$

I can count on.

8, 9, 10, 11, 12

$$8 + 4 = 12$$

I can use a number line.

$$21 + 3 = 24$$

I can use a ten frame.

$$6 + 3 = 9$$

I can draw pictures.

$$5 + 3 = 8$$

I can use base ten blocks.

$$11 + 24 = 35$$

I can use part-part-whole.

$$4 + 6 = 10$$

Lesh, Marsha Landau, 1983 **The Arithmetic Teacher**, 1992 *Proceedings of the ... International Conference for the Psychology of Mathematics Education*, 1998 **Classics in Mathematics Education Research** Thomas P. Carpenter, John A. Dossey, Julie L. Koehler, 2004 This collection of articles which have had a major influence on recent research and together provide a recent historical perspective focuses on themes surrounding evolving conceptions of learning and teaching In the last three decades research in mathematics education has undergone dramatic changes The articles selected for this volume offer perspectives on the development of these themes some of which include the process product paradigm gender and mathematics problem solving students thinking and the role of cultural practises in the acquisition of mathematical concepts and procedures [Children's Mathematics 4-15](#) Julie Ryan, Julian Williams, 2007-04 The phrase errors and misconceptions has recently entered the vocabulary of mathematics

teacher education and become prominent in the curriculum for initial teacher education This follows several decades of academic study of children s errors and misconceptions It is curious that the term misconception is finding favour in the teaching profession just as the term is falling foul of the academic community One approach to children s errors is to view them as potential windows into children s mathematics Errors may diagnose significant ways of thinking and stages in learning and so point to important opportunities for new learning Often misconceptions are acquired through reflection on experience in a limited context for example multiplication makes bigger is a conception drawn from a context of whole numbers When such a conception is erroneously extended and generalised to numbers less than 1 a misconception is diagnosed and real teaching can begin The authors contest the popular view that errors and misconceptions should be corrected as soon as possible On the contrary such misconceptions may be supported by a child s generalised reasoning from experience and therefore require a focused treatment that respects the child s intelligent behaviour A positive view of misconceptions suggests respectful language like alternative frameworks for children s thinking and concept formation The most important consideration is to provide children with the conditions including time to articulate their reasoning confront alternatives and make a rational decision to change their mind or not This book makes use of recent and extensive original data from the authors own researches on children s performance errors and misconceptions across the mathematics curriculum including standardised data from a large national sample of 4 to 15 year olds and conversations involving children in argumentation and work with teachers implementing change in their classrooms The cycle of research includes use of written diagnostic test items children s reasoning as captured in group argumentation details of the types of reasoning that help children to change their mind and the development of tools for classroom teaching by practising teachers The discussion of research is anchored in practical learning and teaching contexts in order to directly relate to mathematics teaching practice and teachers expertise The book progressively develops concepts for teachers to use in organising their understanding and knowledge of children s mathematics concluding with an introduction to theoretical accounts of learning and teaching that can help make practical sense The book bridges the gap between research in the psychology of learning mathematics and the reality of classroom practice The book is ground breaking in that it transforms research on diagnostic errors argumentation and teaching strategies into knowledge for teaching The voices in the research include those of children and teachers in classrooms as well as the academic and research communities
