- and more

Developed by Northrop Grumman, TIGER is based on the leading DoD data link test system, the Multi-Link System Test and Training Tool (MLST3). TIGER hardware includes rack mountable, portable, laptop, and cabinet configurations. The cabinet option can include a Multifunctional Information Distribution System-Low Volume Terminal (MIDS-LVT) and a remote power supply.

Using a powerful battlespace simulator and a flexible array of analysis capabilities, TIGER is a proven interoperability test system used worldwide.

How It Works

TIGER generates tactical data link messages and outputs them as a complete tactical exercise scenario to the system under test. It then receives and interactively processes and displays the output of the system under test. If the interactions comply with appropriate specifications, the system under test is considered interoperable.

The TIGER software suite supplies Pre-Test, Real-Time, and Post-Test Analysis applications.
