

API-614 (Lubrication, Shaft-sealing, and Oil-control Systems and Auxiliaries)

6.6.8 Heating

6.6.8.1 Heaters shall be provided if the minimum site temperature on the data sheet is less than the minimum oil start-up temperature required of the equipment being served.

NOTE 1 Some users elect to use tempered cooling water (see 6.8.1.17 and 6.8.1.18) in the lube-oil heat exchanger to function as a lube-oil heater prior to start-up.

NOTE 2 There are many factors to consider if heating the lube oil to minimum starting temperature, including lube pump start-up minimum oil temperature, equipment minimum oil temperature, circulating heat loss, etc. Many of these factors are the responsibility of the installing contractor in coordination with the console designer. Insulation, location, and heat tracing requirements are considerations of the installation.

6.6.8.2.1 If heaters are required, they shall be provided for heating the charge capacity of oil before start-up in cold weather.

6.6.8.2.4 If an electric heater is specified, a removable electric immersion heating element shall be provided.

6.6.8.2.5 Electric heaters shall have an integral thermostat for reservoir oil temperature control.

6.6.8.5 If specified, temperature devices for remote monitoring and control shall be provided in lieu of an integral thermostat.

NOTE Reservoir heater control can be accomplished by remote monitoring of a temperature sensing element or transmitter versus integral heater thermostat for improved reservoir temperature control.

6.6.8.6.4 Electric immersion heaters shall be interlocked to be de-energized if the oil level drops below the minimum operating level.

6.6.8.6.5 The hot section of the heater element shall be located a minimum of 50 mm (2 in.) below the reservoir minimum operating level.

6.6.8.6.6 Electric heater assemblies shall include a thermal device for over-temperature protection, which is separate from the temperature control device.

6.6.8.7 If specified, electric immersion heaters shall be installed in a manner that allows the heater elements to be removed during operation of the oil system. Top or angle-mounted direct immersion heaters are preferred.

6.6.8.7.1 If dry pipe well (tube) heating elements are used, the cold section of the element shall extend at least 30 cm (12 in.) beyond the reservoir wall, and the thermostat shall be located external to the dry well.

International Agreements between Non-State Actors as a Source of International Law Melissa Loja, 2022-09-22 This book examines whether international agreements between non-state actors can be identified as a source of international law using objective criteria. It asks whether beyond Article 38 of the Statute of the International Court of Justice there is a system of rules, processes, beliefs, or semantics by which these agreements can be objectively identified as a source of international law. Departing from the more usual state-centric analysis, it adopts postmodern legal positivism as its analytical tool. This allows for the reality that international law-making takes place in subjective social landscapes. To test the effectiveness of this approach, it is applied to agreements between petroleum agencies and corporations which allow two or more states to exploit disputed resources across boundaries, looking in particular at arrangements involving China, Vietnam, and the Philippines. By so doing, it illustrates an alternative way that states can manage disputes without having to resort to conflict. It will appeal to both scholars and practitioners of public international law as well as civil servants.
