A Quick Introduction To Complex Analysis Kalyan Chakraborty, Shigeru Kanemitsu, Takako Kuzumaki, 2016-08-08 The aim of the book is to give a smooth analytic continuation from calculus to complex analysis by way

of plenty of practical examples and worked out exercises The scope ranges from applications in calculus to complex analysis in two different levels If the reader is in a hurry he can browse the quickest introduction to complex analysis at the beginning of Chapter 1 which explains the very basics of the theory in an extremely user friendly way Those who want to do self study on complex analysis can concentrate on Chapter 1 in which the two mainstreams of the theory the power series method due to Weierstrass and the integration method due to Cauchy are presented in a very concrete way with rich examples Readers who want to learn more about applied calculus can refer to Chapter 2 where numerous practical applications are provided They will master the art of problem solving by following the step by step guidance given in the worked out examples This book helps the reader to acquire fundamental skills of understanding complex analysis and its applications It also gives a smooth introduction to Fourier analysis as well as a quick prelude to thermodynamics and fluid mechanics information theory and control theory One of the main features of the book is that it presents different approaches to the same topic that aids the reader to gain a deeper understanding of the subject

Evolution Equations With A Complex Spatial Variable Ciprian G Gal, Sorin G Gal, Jerome A Goldstein, 2014-03-18 This book investigates several classes of partial differential equations of real time variable and complex spatial variables including the heat Laplace wave telegraph Burgers Black Merton Scholes Schrödinger and Korteweg de Vries equations The complexification of the spatial variable is done by two different methods The first method is that of complexifying the spatial variable in the corresponding semigroups of operators In this case the solutions are studied within the context of the theory of semigroups of linear operators It is also interesting to observe that these solutions preserve some geometric properties of the boundary function like the univalence starlikeness convexity and spirallikeness The second method is that of complexifying the spatial variable directly in the corresponding evolution equation from the real case More precisely the real spatial variable is replaced by a complex spatial variable in the corresponding evolution equation and then analytic and non analytic solutions are sought For the first time in the book literature we aim to give a comprehensive study of the most important evolution equations of real time variable and complex spatial variables In some cases potential physical interpretations are presented The generality of the methods used allows the study of evolution equations of spatial variables in general domains of the complex plane
