Laboratory Manual for Data Structures and Algorithm Analysis C++ Version Thomas L. Naps, 1995-01-01

Data Structures and Algorithm Analysis in C++ Mark Allen Weiss, 2006 Mark Allen Weiss innovative approach to algorithms and data structures teaches the simultaneous development of sound analytical and programming skills for the advanced data structures course Readers learn how to reduce time constraints and develop programs efficiently by analyzing the feasibility of an algorithm before it is coded The C language is brought up to date and simplified and the Standard Template Library is now fully incorporated throughout the text This Third Edition also features significantly revised coverage of lists stacks queues and trees and an entire chapter dedicated to amortized analysis and advanced data structures such as the Fibonacci heap Known for its clear and friendly writing style Data Structures and

Algorithm Analysis in C is logically organized to cover advanced data structures topics from binary heaps to sorting to NP completeness. Figures and examples illustrating successive stages of algorithms contribute to Weiss' careful, rigorous, and in-depth analysis of each type of algorithm.

Data Structures in Pascal Edward M. Reingold, Wilfred J. Hansen, 1986. This is a revision of the authors' 1982 volume into Pascal, the language most widely used for teaching data structures. Data structures are central to computer science and in particular to programming. In the analytic areas, appropriate data structures have been the key to advances in the design of algorithms. Once appropriate data structures are carefully defined, all that remains is routine coding. A comprehensive understanding of data structure techniques is essential in the design of algorithms and programs. This text presents a carefully chosen fraction of available material but supplement it with a wide variety of exercises. No single book can discuss all known data structures or algorithms. This text presents the art of designing data structures, preparing the student to devise special purpose structures for specific problems as they present themselves.
