Davidson And Mackinnon Estimation And Inference:

Estimation and Inference in Econometrics Russell Davidson, James G. MacKinnon, 1993 Offering students a unifying theoretical perspective this innovative text emphasizes nonlinear techniques of estimation including nonlinear least squares nonlinear instrumental variables maximum likelihood and the generalized method of moments but nevertheless relies heavily on simple geometrical arguments to develop intuition One theme of the book is the use of artificial regressions for estimation inference and specification testing of nonlinear models including diagnostic tests for parameter constancy series correlation heteroskedasticity and other types of misspecification Other topics include the linear simultaneous equations model non nested hypothesis tests influential observations and leverage transformations of the dependent variable binary response models models for time series cross section data multivariate models seasonality unit roots and cointegration and Monte Carlo methods always with an emphasis on problems that arise in applied work Explaining throughout how estimates can be obtained and tests can be carried out the text goes beyond a mere algebraic description to one that can be easily translated into the commands of a standard econometric software package A comprehensive and coherent guide to the most vital topics in econometrics today this text is indispensable for all levels of students of econometrics economics and statistics on regression and related topics

A Companion to Theoretical Econometrics Badi H. Baltagi, 2008-04-15 A Companion to Theoretical Econometrics provides a comprehensive reference to the basics of econometrics This companion focuses on the foundations of the field and at the same time integrates popular topics often encountered by practitioners The chapters are written by international experts and provide up to date research in areas not usually covered by standard econometric texts Focuses on the foundations of econometrics Integrates real world topics encountered by professionals and practitioners Draws on up to date research in areas not covered by standard econometrics texts Organized to provide clear accessible information and point to further readings

Bootstrap Tests for Regression Models L. Godfrey, 2009-07-29 An accessible discussion examining computationally intensive techniques and bootstrap methods providing ways to improve the finite sample performance of well known asymptotic tests for regression models This book uses the linear regression model as a framework for introducing simulation based tests to help perform econometric analyses

State-Space Methods for Time Series Analysis Jose Casals, Alfredo Garcia-Hiernaux, Miguel Jerez, Sonia Sotoca, A. Alexandre Trindade, 2018-09-03 The state space approach provides a formal framework where any result or procedure developed for a basic model can be seamlessly applied to a standard formulation written in state space form Moreover it can accommodate with a reasonable effort nonstandard situations such as observation errors aggregation constraints or missing in sample values Exploring the advantages of this approach State Space Methods for Time Series Analysis Theory Applications and Software presents many computational procedures that can be applied to a previously specified linear model in state space form After discussing the formulation of the state space model the book illustrates the flexibility of the state space representation and covers the main

state estimation algorithms filtering and smoothing It then shows how to compute the Gaussian likelihood for unknown coefficients in the state space matrices of a given model before introducing subspace methods and their application It also discusses signal extraction describes two algorithms to obtain the VARMAX matrices corresponding to any linear state space model and addresses several issues relating to the aggregation and disaggregation of time series The book concludes with a cross sectional extension to the classical state space formulation in order to accommodate longitudinal or panel data Missing data is a common occurrence here and the book explains imputation procedures necessary to treat missingness in both exogenous and endogenous variables Web Resource The authors E4 MATLAB toolbox offers all the computational procedures administrative and analytical functions and related materials for time series analysis This flexible powerful and free software tool enables readers to replicate the practical examples in the text and apply the procedures to their own work Recent Advances and Future Directions in Causality, Prediction, and Specification Analysis Xiaohong Chen, Norman R.

Swanson, 2012-08-01 This book is a collection of articles that present the most recent cutting edge results on specification and estimation of economic models written by a number of the world's foremost leaders in the fields of theoretical and methodological econometrics Recent advances in asymptotic approximation theory including the use of higher order asymptotics for things like estimator bias correction and the use of various expansion and other theoretical tools for the development of bootstrap techniques designed for implementation when carrying out inference are at the forefront of theoretical development in the field of econometrics One important feature of these advances in the theory of econometrics is that they are being seamlessly and almost immediately incorporated into the empirical toolbox that applied practitioners use when actually constructing models using data for the purposes of both prediction and policy analysis and the more theoretically targeted chapters in the book will discuss these developments Turning now to empirical methodology chapters on prediction methodology will focus on macroeconomic and financial applications such as the construction of diffusion index models for forecasting with very large numbers of variables and the construction of data samples that result in optimal predictive accuracy tests when comparing alternative prediction models Chapters carefully outline how applied practitioners can correctly implement the latest theoretical refinements in model specification in order to build the best models using large scale and traditional datasets making the book of interest to a broad readership of economists from theoretical

econometricians to applied economic practitioners **Spatial Econometrics: Methods and Models** L. Anselin, 2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the

field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis
