div **Web Standards Solutions** Daniel Cederholm, 2009-10-21 Welcome to the expanded second edition of Dan Cederholm s bestselling *Web Standards Solutions* Web standards are the standard technology specifications enforced by the World Wide Web Consortium W3C to make sure that web designers and browser manufacturers are using the same technology syntax It is important that these implementations are the same throughout the Web otherwise it becomes a messy proprietary place and lacks consistency These standards also allow content to be more compatible with multiple different viewing devices such as screen readers for people with vision impairments cell phones PDFs etc HTML XML and CSS are all such technologies This book is your essential guide to understanding the advantages you can bring to your web pages by implementing web standards and precisely how to apply them Web standards such as XHTML and CSS are now fairly well known technologies and they will likely be familiar to you the web designer Indeed they are all around you on the Web However within web standards still lies a challenge while the browser s support for web standards is steadily increasing many web developers and designers have yet to discover the real benefits of web standards and respect the need to adhere to them The real art is in truly understanding the benefits and implementing the standards efficiently As a simple example of its power you can use CSS to lay out your pages instead of nesting tables This can make file sizes smaller allowing

pages to load faster ultimately increasing accessibility for all browsers devices and web users Expanded edition containing bonus material Teaches how to use Web standards effectively to build better web sites Solutions style promotes learning by work through examples and assessments

Designing Web-Based Applications for 21st Century Writing Classrooms George Pullman,Gu Baotong,2016-12-05 Designing Web Based Applications for 21st Century Writing Classrooms brings together for the first time a group of scholars and teachers who have been developing on their own initiative web based solutions to technical and professional writing instructional problems In industry the perennial question is whether to buy or build but in academia for various reasons buy is rarely an option Individual faculty members do not have the money to pay for software solutions and often their interests are too local or small scale to warrant institutional level involvement In addition the design of commercial applications from vendors typically does not take into account the unique needs and considerations of teachers of writing and often reflects a design ideology quite different from theirs This is why so many writing teachers have turned to open source solutions and in the process of learning how to tweak them to make them more responsive to their specific needs why so many of these teachers have developed programming and design skills Beyond exigency the motivation for becoming proficient at interface and database design comes from the observation that the nature of writing is changing dramatically Text is no longer an object It has become a place of interaction consumers are becoming producers And the work of technical and professional communication indeed the work of writing teachers more generally is becoming increasingly involved in the design and implementation of places of interaction Words have become data texts are becoming communities
