Rothstein, 2022 Digital transformation increasingly drives economic growth in the rich capitalist democracies but orienting production around digital technologies is associated with rising inequality and spreading precarity In *Recoding Power* Rothstein outlines three tactics that workers can use to build power in the current episode of economic transition where they otherwise lack access to traditional power resources like unions and institutions for social protection Drawing on four in depth case studies of workers responding to mass layoffs at tech firms in the United States and Germany Rothstein shows how workers can develop creative tactics to recode management s discursive techniques for control transforming them from obstacles into resources for collective action By centering workers lived experiences in the workplace *Recoding Power* develops an account of existing digital transformation illustrating how the path of capitalist development is shaped not by economic necessity but

Accelerating Digital Transformation on Z Using Data Virtualization Blanca Borden, Calvin Fudge, Jen Nelson, Jim Porell, 2021
This IBM Redpaper publication introduces a new data virtualization capability that enables IBM z OS data to be combined with other enterprise data sources in real time which allows applications to access any live enterprise data anytime and use the power and efficiencies of the IBM Z platform
Modern businesses need actionable and timely insight from current data
They cannot afford the time that is necessary to copy and transform data
They also cannot afford to secure and protect each copy of personally identifiable information and corporate intellectual property
Data virtualization enables direct connections to be established between multiple data sources and the applications that process the data
Transformations can be applied in line to enable real time access to data which opens up many new ways to gain business insight with less IT infrastructure necessary to achieve those goals
Data virtualization can become the backbone for advanced analytics and modern applications
The IBM Data Virtualization Manager for z OS DVM can be used as a stand alone product or as a utility that is used by other products
Its goal is to enable access to live mainframe transaction data and make it usable by any application
This is what enables customers to use the strengths of mainframe processing with new agile applications
Additionally its modern development environment and code generating capabilities enable any developer to update access and combine mainframe data easily by using modern APIs and languages
If data is the foundation for building new insights IBM DVM is a key tool for providing easy cost efficient access to that foundation
