Krantz, 2016-03-17 In this original text prolific mathematics author Steven G Krantz addresses conformal geometry a subject that has occupied him for four decades and for which he helped to develop some of the modern theory This book takes readers with a basic grounding in complex variable theory to the forefront of some of the current approaches to the topic Along the way the author notes in his Preface the reader will be exposed to some beautiful function theory and also some of the rudiments of geometry and analysis that make this subject so vibrant and lively More up to date and accessible to advanced undergraduates than most of the other books available in this specific field the treatment discusses the history of this active and popular branch of mathematics as well as recent developments Topics include the Riemann mapping theorem invariant metrics normal families automorphism groups the Schwarz lemma harmonic measure extremal length analytic capacity and invariant geometry A helpful Bibliography and Index complete the text **Elementary Point-Set Topology** Andre L. Yandl, Adam Bowers, 2016-04-10 In addition to serving as an introduction to the basics of point set topology this text bridges the gap between the elementary calculus sequence and higher level mathematics courses The versatile original approach focuses on learning to read and write proofs rather than covering advanced topics Based on lecture notes that were developed over many years at The University of Seattle the treatment is geared toward undergraduate math majors and suitable for a variety of introductory courses Starting with elementary concepts in logic and basic techniques of proof writing the text defines topological and metric spaces and surveys continuity and homeomorphism Additional subjects include product spaces connectedness and compactness The final chapter illustrates topology's use in other branches of mathematics with proofs of the fundamental theorem of algebra and of Picard's existence theorem for differential equations This is a back to basics introductory text in point set topology that can double as a transition to proofs course The writing is very clear not too concise or too wordy Each section of the book ends with a large number of exercises The optional first chapter covers set theory and proof methods if the students already know this material you can start with Chapter 2 to present a straight topology course otherwise the book can be used as an introduction to proofs course also Mathematical Association of America *The Schwarz Lemma* Sean Dineen, 2016-04-06 Suitable for advanced undergraduates and graduate students this self contained overview covers the classical Schwarz lemma Poincaré distance on the unit disc hyperbolic manifolds holomorphic curvature and the analytic Radon Nikodym property 1989 edition **Algebraic Logic** Paul R. algebras these articles are essentially self contained and accessible to a general mathematical audience requiring no specialized knowledge of algebra or logic Part One addresses monadic algebras with articles on general theory representation and freedom Part Two explores polyadic algebras progressing from general theory and terms to equality Part Three offers three items on polyadic Boolean algebras including a survey of predicates terms operations and equality The book concludes with an additional bibliography and index

Optimization in Function Spaces Amol Sasane,2016-04-10 This highly readable volume on optimization in function spaces is based on author Amol Sasane s lecture notes which he developed over several years while teaching a course for third year undergraduates at the London School of Economics The classroom tested text is written in an informal but precise style that emphasizes clarity and detail taking students step by step through each subject Numerous examples throughout the text clarify methods and a substantial number of exercises provide reinforcement Detailed solutions to all of the exercises make this book ideal for self study The topics are relevant to students in engineering and economics as well as mathematics majors Prerequisites include multivariable calculus and basic linear algebra The necessary background in differential equations and elementary functional analysis is developed within the text offering students a self contained treatment
