Feldman, David Tonge, Phil Freo, Tim Branyen, 2013 Backbone is a JavaScript library designed to give structure to your web applications It gives you a robust yet flexible framework to build your client side JavaScript application Backbone doesn't force you into a particular coding style or paradigm There is no magic happening below the surface the source code is clear readable and well commented Backbone is also lightweight in the sense that it doesn't require a ton of buy in to use It can be easily integrated into an existing page and you can choose to only use certain components of the library Views without Models or Collections for example While there are many frameworks that seem to be faster to get started with Backbone's lack of surprises clear documentation speed and flexibility make it a good fit for all types of apps This book incorporates best
