Canadian Journal of Chemistry, 2003 **Journal of the Institution of Electrical Engineers**, 1922 **Selecting Models from Data** P. Cheeseman, R.W. Oldford, 2012-12-06 This volume is a selection of papers presented at the Fourth International Workshop on Artificial Intelligence and Statistics held in January 1993 These biennial workshops have succeeded in bringing together researchers from Artificial Intelligence and from Statistics to discuss problems of mutual interest The exchange has broadened research in both fields and has strongly encouraged interdisciplinary work The theme of the 1993 AI and Statistics workshop was Selecting Models from Data The papers in this volume attest to the diversity of approaches to model selection and to the ubiquity of the problem Both statistics and artificial intelligence have independently developed approaches to model selection and the corresponding algorithms to implement them But as these papers make clear there is a high degree of overlap between the different approaches In particular there is agreement that the fundamental problem is the avoidance of overfitting Le where a model fits the given data very closely but is a poor predictor for new data in other words the model has partly fitted the noise in the original data **Journal of the Society of**

Tunable Solid State Lasers P. Hammerling, A.B. Budgor, A. Pinto, 2013-04-17 In recent years there has been renewed interest in the scientific and industrial communities in tunable solid state vibronic lasers Much of this has been spurred by the user desirous of obtaining compact primary laser sources independent of nonlinear optical frequency shifts throughout the visible and near infra red spectral regions To further motivate and stimulate research and development in this area workshops sponsored by the Laser Division of the US Army Night Vision Electro Optics Laboratory NVEOL at Fort Belvoir Virginia were held during 1-3 April 1981 and 16-17 June 1983 at Keystone and NVEOL respectively The consensus of opinion of the participants at these workshops was that any successful program leading to the identification and development of vibronic tunable laser materials in the visible and IR must include coordinated activity between crystal growers theoretical and experimental investigators into the fundamental processes of vibronic lasing and laser device engineers Continued interaction between government industry and academia was encouraged in order to establish a unified approach to these areas and when necessary redefine and redirect programmatic activity The organization of this 1st Annual Conference on Tunable Solid State Lasers held at the La Jolla Institute 13-15 June 1984 was based around the latest results in tunable vibronic materials and laser development but structured in a manner consistent with the recommendations of the NVEOL workshops **Geothermal Energy** Richard Allen Downing, D. A. Gray, 1986 **Principles of Communications** Rodger E. Ziemer, William H. Tranter, 2014-03-17 Ziemer and Tranter provide a thorough treatment of the principles of communications

at the physical layer suitable for college seniors beginning graduate students and practicing engineers This is accomplished by providing overviews of the necessary background in signal system probability and random process theory required for the analog and digital communications topics covered in the book In addition to stressing fundamental concepts the seventh edition features sections on important areas such as spread spectrum cellular communications and orthogonal frequency division multiplexing While the book is aimed at a two semester course more than enough material is provided for structuring courses according to students need and instructor preference

Interface and Transport Dynamics Heike Emmerich, Britta Nestler, Michael Schreckenber, 2003-09-03 An overview of the recent progress of research in computational physics and materials science Particular topics are modelling of traffic flow and complex multi scale solidification phenomena The sections introduce novel research results of experts from a considerable diversity of disciplines such as physics mathematical and computational modelling nonlinear dynamics materials sciences statistical mechanics and foundry technique The book intends to create a comprehensive and coherent image of the current research status and illustrates new simulation results of transport and interface dynamics by high resolution graphics Various possible perspectives are formulated for future activities Special emphasis is laid on exchanging experiences concerning numerical tools and on the bridging of the scales as is necessary in a variety of scientific and engineering applications An interesting possibility along this line was the coupling of different computational approaches leading to hybrid simulations

Transcendental Representations with Applications to Solids and Fluids Luis Manuel Braga da Costa Campos, 2012-04-04 Building on the author's previous book in the series *Complex Analysis with Applications to Flows and Fields* CRC Press 2010 *Transcendental Representations with Applications to Solids and Fluids* focuses on four infinite representations series expansions series of fractions for meromorphic functions infinite products for functions with infinitely many zeros and continued fractions as alternative representations This book also continues the application of complex functions to more classes of fields including incompressible rotational flows compressible irrotational flows unsteady flows rotating flows surface tension and capillarity deflection of membranes under load torsion of rods by torques plane elasticity and plane viscous flows The two books together offer a complete treatment of complex analysis showing how the elementary transcendental functions and other complex functions are applied to fluid and solid media and force fields mainly in two dimensions The mathematical developments appear in odd numbered chapters while the physical and engineering applications can be found in even numbered chapters The last chapter presents a set of detailed examples Each chapter begins with an introduction and concludes with related topics Written by one of the foremost authorities in aeronautical aerospace engineering this self contained book gives the necessary mathematical background and physical principles to build models for technological and scientific purposes It shows how to formulate problems justify the solutions and interpret the results
