General Relativity for Mathematicians R.K. Sachs, H.-H. Wu, 2012-12-06 This is a book about physics written for mathematicians The readers we have in mind can be roughly described as those who 1 are mathematics graduate students with some knowledge of global differential geometry 2 have had the equivalent of freshman physics and find popular accounts of astrophysics and cosmology interesting 3 appreciate mathematical clarity but are willing to accept physical motivations for the mathematics in place of mathematical ones 4 are willing to spend time and effort mastering certain technical details such as those in Section 1 1 Each book disappoints so me readers This one will disappoint 1 physicists who want to use this book as a first course on differential geometry 2 mathematicians who think Lorentzian manifolds are wholly similar to Riemannian ones or that given a sufficiently good mathematical background the essentials of a subject like cosmology can be learned without so me hard work on boring details 3 those who believe vague philosophical arguments have more than historical and heuristic significance that general relativity should somehow be proved or that axiomatization of this subject is useful 4 those who want an encyclopedic treatment the books by Hawking Ellis 1 Penrose 1 Weinberg 1 and Misner Thorne Wheeler I go further into the subject than we do see also the survey article Sachs Wu 1 5 mathematicians who want to learn quantum physics or unified field theory unfortunately quantum physics texts all seem either to be for physicists or merely concerned with formal mathematics
