Basic Theory in Reflection Seismology J.K. Costain, C. Coruh, 2004-10-27 The material in this volume provides the basic theory necessary to understand the principles behind imaging the subsurface of the Earth using reflection and refraction seismology For reflection seismology the end product is a record section from a collection of wiggly traces that are recorded in the field from which

information about the properties of subsurface structure and rock can be derived For the most part the principles of imaging are the same regardless of the depth to the target the same mathematical background is necessary for targeting a shallow water table as for investigating the base of the earth s continental crust at a depth of 30 50 km

Basic Radar Tracking Mervin C. Budge, Shawn R. German, 2018-10-31 Detailed closed loop bandwidth and transient response approach is a subject rarely found in current literature This innovative resource offers practical explanations of closed loop radar tracking techniques in range Doppler and angle tracking To address analog closed loop trackers a review of basic control theory and modeling is included In addition control theory radar receivers signal processors and circuitry and algorithms necessary to form the signals needed in a tracker are presented Digital trackers and multiple target tracking are also covered focusing on g h and g h k filters Readers learn techniques for modeling digital closed loop trackers The radar circuitry block diagrams necessary for range Doppler and angle tracking are presented and described with examples and simulations included Factors such as noise and Swerling type fluctuations are taken into account In addition to numerous worked examples this approachable reference includes MATLAB code associated with analysis simulations and figures The book contains solutions to practical problems making it useful for both novice and advanced radar practitioners Software will be available for download on this page
