## 14.1 Human Heredity

### I. Human Chromosomes

#### A. Looking at chromosomes

1. During mitosis, scientists look at chromosomes: photo; cut; paste in pairs
  - a. called karyotype (Fig 14-1; pg 341)
  - b. 23 pairs; 46 total
2. 2 Chromosomes are known as sex chromosomes
  - a. they determine an individual's sex
  - b. females = XX (larger)
  - c. males = XY (large, small)
3. Other 44 chromosomes are called autosomes
4. To quickly summarize total # of chromosomes in a human cell, scientists write 46XX (female) or 46XY (male)
5. Punnett Square explains why there is a 50:50 ratio of males:females (Fig 14-2; pg 342)

### II. Human Traits

#### A. Human traits are not always controlled by a single gene: sometimes the environment may "create" a trait

1. Pedigree (Fig 14-3; pg 242)
  - a. chart that shows the relationships within a family
2. Example shows how a trait is transmitted through three generations
  - a. females who have one allele for the trait are only carriers; males who have only one express the trait
  - b. female carrier marries male who doesn't carry the trait
  - c. they have four children:
    - i. female carrier, female non-carrier, male w/trait, male w/o
  - d. female carrier marries male w/o trait; have 3 children
    - i. male w/trait; male w/o; female non-carrier
3. Polygenic
  - a. traits that are controlled by many genes
4. Nature v. Nurture
  - a. genotype is only partly responsible for phenotype
    - i. environment/nutrition/exercise
  - b. nutrition allowed average heights to increase 10 cm since 1800s

### III. Human Genes

#### A. Blood Group Genes (Fig 14-4; pg 344)

1. Human blood comes in a variety of genetically determined blood types
  - a. a number of genes are responsible for blood type
    - i. best known are ABO blood groups and Rh blood groups
  - b. Rh is determined by a single gene with 2 alleles
    - i. positive and negative
    - ii. Rh = rhesus monkey; animal where it was discovered
    - iii. positive is dominant
  - c. ABO is more complicated; three alleles for this gene

*Transmission and Population Genetics* Benjamin A. Pierce, 2006-01-09 This new brief version of Benjamin Pierce's *Genetics: A Conceptual Approach* Second Edition responds to a growing trend of focusing the introductory course on transmission and population genetics and covering molecular genetics separately. The book is comprised of following chapters: an case studies from Pierce's complete text 1 Introduction to Genetics 2 Chromosomes and Cellular Reproduction 3 Basic Principles of Heredity 4 Sex Determination and Sex Linked Characteristics 5 Extensions and Modifications of Basic Principles 6 Pedigree Analysis and Applications INTEGRATIVE CASE STUDY Phenylketonuria Part I 7 Linkage Recombination and Eukaryotic Gene Mapping 8 Bacterial and Viral Genetic Systems 9 Chromosome Variation INTEGRATIVE CASE STUDY Phenylketonuria Part II 22 Quantitative Genetics 23 Population Genetics and Molecular Evolution INTEGRATIVE CASE STUDY Phenylketonuria Part III *Biology* Glencoe/McGraw-Hill, 1994-07 **Genetics** Benjamin Pierce, 2004-12-24 Based on the author's more than twenty years of teaching experience *Genetics: A Conceptual Approach* offers a fresh new way of introducing the major concepts and mechanics of genetics focusing students on the big picture without overwhelming them with detail **Forensic DNA Trace Evidence Interpretation** Duncan Taylor, Bas Kokshoorn, 2023-05-30 *Forensic DNA Trace Evidence Interpretation* Activity Level Propositions and Likelihood Ratios provides all foundational information required for a reader to understand the practice of evaluating forensic biology evidence given activity level propositions and to implement the practice into active casework within a forensic institution. The book begins by explaining basic concepts and foundational theory pulling together research and studies that have accumulated in forensic journal literature over the last 20 years. The book explains the laws of probability showing how they can be used to derive from first principles the likelihood ratio used throughout the book to express the strength of evidence for any evaluation. Concepts such as the hierarchy of propositions the difference between experts working in an investigative or evaluative mode and the practice of case assessment and interpretation are explained to provide the reader with a broad grounding in the topics that are important to understanding evaluation of evidence. Activity level evaluations are discussed in relation to biological material transferred from one object to another the ability for biological material to persist on an item for a period of time or through an event the ability to recover the biological material from the object when sampled for forensic testing and the expectations of the prevalence of biological material on objects in our environment. These concepts of transfer persistence prevalence and recovery are discussed in detail in addition to the factors that affect each of them. The authors go on to explain the evaluation process how to structure case information and formulate propositions. This includes how a likelihood ratio formula can be derived to evaluate the forensic findings introducing Bayesian networks and explaining what they represent and how they can be used in evaluations and showing how evaluation can be tested for robustness. Using these tools the authors also demonstrate the ways that the methods used in activity level evaluations are applied to questions

about body fluids There are also chapters dedicated to reporting of results and implementation of activity level evaluation in a working forensic laboratory Throughout the book four cases are used as examples to demonstrate how to relate the theory to practice and detail how laboratories can integrate and implement activity level evaluation into their active casework

Mader, 1992 This market leading human biology text emphasizes the relationships of humans to other living things Human Biology remains user friendly relevancy and pedagogy are among its strengths In this edition as in previous editions each chapter presents the topic clearly and distinctly so that students will feel capable of achieving an adult level of understanding Detailed high level scientific data and terminology are not included because Dr Mader believes that true knowledge consists of working concepts rather than technical facility **The Sceptical Optimist** Nicholas Agar, 2015-07-09 The rapid developments in technologies especially computing and the advent of many smart devices as well as rapid and perpetual communication via the Internet has led to a frequently voiced view which Nicholas Agar describes as radical optimism Radical optimists claim that accelerating technical progress will soon end poverty disease and ignorance and improve our happiness and well being Agar disputes the claim that technological progress will automatically produce great improvements in subjective well being He argues that radical optimism assigns to technological progress an undeserved pre eminence among all the goals pursued by our civilization Instead Agar uses the most recent psychological studies about human perceptions of well being to create a realistic model of the impact technology will have Although he accepts that technological advance does produce benefits he insists that these are significantly less than those proposed by the radical optimists and aspects of such progress can also pose a threat to values such as social justice and our relationship with nature while problems such as poverty cannot be understood in technological terms He concludes by arguing that a more realistic assessment of the benefits that technological advance can bring will allow us to better manage its risks in future
