Security in Computing Systems Joachim Biskup, 2008-11-14 This monograph on Security in Computing Systems Challenges Approaches and Solutions aims at introducing surveying and assessing the fundamentals of security with respect to computing Here computing refers to all activities which individuals or groups directly or indirectly perform by means of computing systems i.e. by means of computers and networks of them built on telecommunication We all are such individuals whether enthusiastic or just bowed to the inevitable So as part of the information society we are challenged to maintain our values to pursue our goals and to enforce our interests by consciously designing a global information infrastructure on a large scale as well as by appropriately configuring our personal computers on a small scale As a result we hope to achieve secure computing Roughly speaking computer assisted activities of individuals and computer mediated cooperation between individuals should happen as required by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously

 Accordingly we do not know of any competitive literature Aspects of Personal Privacy in Communications - Problems,
 Technology and Solutions Geir M. Koien, Vladimir a. Oleshchuk, 2025-01-13 The modern society is rapidly becoming a fully
 digital society This has many benefits but unfortunately it also means that personal privacy is threatened The threat does not
 so much come from a 1984 style Big Brother but rather from a set of smaller big brothers The small big brothers are
 companies that we interact with they are public services and institutions Many of these little big brothers are indeed also
 being invited to our private data by ourselves Privacy as a subject can be problematic At the extreme it is personal freedom
 against safety and security We shall not take a political stand on personal privacy and what level of personal freedom and
 privacy is the correct one Aspects of Personal Privacy in Communications is mostly about understanding what privacy is and
 some of the technologies may help us to regain a bit of privacy We discuss what privacy is about what the different aspects of
 privacy may be and why privacy needs to be there by default There are boundaries between personal privacy and societal
 requirements and inevitably society will set limits to our privacy Lawful Interception etc There are technologies that are
 specifically designed to help us regain some digital privacy These are commonly known as Privacy Enhancing Technologies
 PETs We investigate some these PETs including MIX networks Onion Routing and various privacy preserving methods Other
 aspects include identity and location privacy in cellular systems privacy in RFID Internet of Things IoT and sensor networks
 amongst others Some aspects of cloud systems are also covered *Botnets* Georgios Kambourakis, Marios
 Anagnostopoulos, Weizhi Meng, Peng Zhou, 2019-09-26 This book provides solid state of the art contributions from both
 scientists and practitioners working on botnet detection and analysis including botnet economics It presents original
 theoretical and empirical chapters dealing with both offensive and defensive aspects in this field Chapters address
 fundamental theory current trends and techniques for evading detection as well as practical experiences concerning
 detection and defensive strategies for the botnet ecosystem and include surveys simulations practical results and case

Optimization David W. Corne, Martin J. Oates, George D. Smith, 2000-11-02 Written in an accessible and easy to read style this cutting edge book presents advanced solutions to current and future telecommunications optimization problems The field of telecommunications is growing and changing ever more rapidly presenting new real world problems for optimization researchers to address Telecommunications engineers tend to know all about the problems involved but are often not aware of developments in computer science and artificial intelligence that might solve those problems This unique book takes a collaborative approach describing the essence of the problems and then the heuristic and adaptive techniques which are now recognised as adept at solving these problems In addition the emerging technologies in telecommunications and increasing use of the Internet expand the role that advanced heuristic and adaptive methods can play Topics covered include Heuristic techniques covering local search methods and population based search techniques Adaptive computation techniques covering neural computation fuzzy logic and game theory Practical and successful ways to address problems in network design and planning routing protocol design and network management This state of the art book will be an essential resource for optimization researchers needing a wider appreciation of the problems in telecommunications and indispensable for telecommunications engineers using heuristic and adaptive techniques
