Concrete Technology 4th Edition International Edition:

Properties of Concrete Adam M. Neville, 1996-07-25 Since its first publication in 1963 *Properties of Concrete* has been internationally acclaimed as the definitive work of reference on the subject for both the professional and student engineer. The fourth edition has been completely rewritten and updated to reflect advances in concrete technology over the past decade yet it still retains the original aim of Professor Neville's book to provide reliable comprehensive and practical information on the properties and use of concrete and the selection of mix proportions all based on scientific observations and the author's extensive engineering experience. The emphasis throughout is on understanding the behaviour of concrete and relating it to physical and chemical phenomena involved in the performance of the material in service. The overall effect is to give an integrated view of the properties of concrete so as to enable the reader to achieve the best possible construction in concrete. In addition the scientific basis of the information provided is invaluable in planning research and in the interpretation of test results. New material includes such topics as various cementitious materials, high performance concrete, recently introduced admixtures, concrete under cryogenic conditions, properties of the aggregate matrix interface and durability of concrete under extreme conditions. Incorporates a wealth of data from the latest relevant national and international standards and codes of practice. Both SI and Imperial units are used throughout. Includes 1500 full references to the world's literature on concrete. An extensive index containing over 6000 entries provides excellent ease of reference. With its many new additions the book at 844 pages is now an encyclopaedic tome which is very reasonably priced. It remains the authoritative source of information on most aspects of the constituents' behaviour and properties of fresh and hardened concrete. *Magazine of Concrete Research*

Codal provisions of US, UK and India are included to cater to a global audience. Insights into techniques like modern surveying equipment and technologies, sustainable construction materials and modern construction materials are also included. Key features: Provides a concise presentation of theory and practice for all technical in civil engineering. Contains detailed theory with lucid illustrations. Focuses on the management aspects of a civil engineer's job. Addresses contemporary issues such as permitting, globalization, sustainability and emerging technologies. Includes codal provisions of US, UK and India. The book is aimed at professionals and senior undergraduate students in civil engineering. non-specialist civil engineering audience

Fracture mechanics of concrete: Material characterization and testing Alberto Carpinteri, Anthony R. Ingraffea, 2012-12-06 In this volume on the mechanics of fracture of Portland cement concrete the general theme is the connection between microstructural phenomena

and macroscopic models The issues addressed include techniques for observation over a wide range of scales the influence of microcracking on common measures of strength and deformability and ultimately the relationship between microstructural changes in concrete under load and its resistance to cracking It is now commonly accepted that in past attempts to force fit the behavior of concrete into the rules of linear elastic fracture mechanics proper attention has not been paid to scale effects Clearly the relationships among specimen size crack length and opening and characteristic material fabric dimensions have been in comparison to their counterparts in metals ceramics and rocks abused in concrete Without a fundamental understanding of these relationships additional testing in search of the elusive single measure of fracture toughness has spawned additional confusion and frustration No one is in a better position to document this observation than Professor Mindess

Construction Materials Peter Domone, John Illston, 2018-10-03 So far in the twenty first century there have been many developments in our understanding of materials behaviour and in their technology and use This new edition has been expanded to cover recent developments such as the use of glass as a structural material It also now examines the contribution that material selection makes to sustainable construction practice considering the availability of raw materials production recycling and reuse which all contribute to the life cycle assessment of structures As well as being brought up to date with current usage and performance standards each section now also contains an extra chapter on recycling Covers the following materials metals concrete ceramics including bricks and masonry polymers fibre composites bituminous materials timber glass This new edition maintains our familiar and accessible format starting with fundamental principles and continuing with a section on each of the major groups of materials It gives you a clear and comprehensive perspective on the whole range of materials used in modern construction A must have for Civil and Structural engineering students and for students of architecture surveying or construction on courses which require an understanding of materials

Mojekwu, Lawrence Atepor, Emmanuel Adinyira, Gabriel Nani, Emmanuel Bamfo-Agyei, 2024-11-22 This book is Volume 2 of the proceedings of 2023 Sustainable Education and Development Research Conference This volume concentrates on papers in the area of green buildings Despite considerable progress more than 700 million people worldwide still lack access to electricity and around 2.4 billion people continue to use harmful and polluting fuels for cooking While efforts have been made to promote renewable energy and energy efficiency they have not been fast enough to achieve Sustainable Development Goal 7 Adding to the challenge the ongoing war in Ukraine has contributed to rising global energy prices and heightened energy insecurity in Europe In response to the energy crisis some European countries are planning to accelerate the transition to renewables and increase investments in clean energy and energy efficiency However others are considering a resurgence of coal which poses a risk to the overall green

transition Between 2010 and 2020 the percentage of the global population with access to electricity increased from 83% to 91% with 1.3 billion people gaining access Nevertheless this leaves approximately 733 million people still without electricity and most of them reside in sub-Saharan Africa Achieving universal access by 2030 the annual growth rate in access needs to accelerate from 0.5 percentage points to 0.9 percentage points necessitating significant efforts in low income fragile and conflict affected countries In 2020 69% of the global population had access to clean cooking fuels and technologies While more than half of those without access to clean cooking fuels live in Asia the 20 countries with the lowest percentage of people having access to clean cooking were predominantly least developed countries in Africa The share of renewable sources in total final energy consumption reached 17.7% globally in 2019 just slightly higher than the figure for 2015 The electricity sector leads in the adoption of renewables accounting for 26.2% of total final energy consumption in 2019 while the heat and transport sectors have made limited progress Global primary energy intensity defined as global total energy supply per unit of GDP improved from 5.6 megajoules per dollar 2017 purchasing power parity in 2010 to 4.7 megajoules in 2019 However the rate of improvement 1.6% per year on average since 2015 falls short of the 3.2% annual rate needed to reach Sustainable Development Goal 7.3 International financial flows to support clean and renewable energy in developing countries reached 10.9 billion in 2019 a 23.6% decrease from 2018 This decline occurred even before the onset of the COVID-19 pandemic Over a longer five year moving average average annual commitments decreased for the first time since 2008 from 17.5 billion in 2014 to 16.6 billion in 2015-19 Although developing countries achieved a record of 245.7 watts per capita in installed renewable energy generating capacity in 2020 small island developing States least developed countries and landlocked developing countries have lagged behind It would take least developed countries and landlocked developing countries nearly 40 years and small island developing States almost 15 years to reach the same level of progress as the average developing country in 2020 The 2023 SEDRC conference titled Sustainable Development and Education aims to redefine the understanding of research in the continent's development and the role of researchers The conference focusses on applied research discussions and its dissemination Researchers from research institutions academicians postgraduate students politicians and industry representatives will be the primary audience for the conference proceedings
