Configuration And Management Of Digital Library Using Dspace:

Theoretical Foundations for Digital Libraries Edward Fox,Marcos André Gonçalves,Rao Shen,2022-06-01 In 1991 a group of researchers chose the term digital libraries to describe an emerging field of research development and practice Since then Virginia Tech has had funded research in this area largely through its Digital Library Research Laboratory This book is the first in a four book series that reports our key findings and current research investigations Underlying this book series are six completed dissertations Gon alves Kozievitch Leidig Murthy Shen Torres eight dissertations underway and many masters theses These reflect our experience with a long string of prototype or production systems developed in the lab such as CITIDEL CODER CTRnet Ensemble ETANA ETD db MARIAN and Open Digital Libraries There are hundreds of related publications presentations tutorials and reports We have built upon that work so this book and the others in the series will address digital library related needs in many computer science information science and library science e g LIS courses as well as the requirements of researchers developers and practitioners Much of the early work in the digital library field struck a balance between addressing real world needs integrating methods from related areas and advancing an ever expanding research agenda Our work has fit in with these trends but simultaneously has been driven by a desire to provide a firm conceptual and formal basis for the field Our aim has been to move from engineering to science We claim that our 5S Societies Scenarios Spaces Structures Streams framework discussed in publications dating back to at least 1998 provides a suitable basis This book introduces 5S and the key theoretical and formal aspects of the 5S framework While the 5S framework may be used to describe many types of information systems and is likely to have even broader utility and appeal we focus here on digital libraries Our view of digital libraries is broad so further generalization should be straightforward We have connected with related fields including hypertext hypermedia information storage and retrieval knowledge management machine learning multimedia personal information management and Web 2 0 Applications have included managing not only publications but also archaeological information educational resources fish images scientific datasets and scientific experiments simulations Table of Contents Introduction Exploration Mathematical Preliminaries Minimal Digital Library Archaeological Digital Libraries 5S Results Lemmas Proofs and 5SSuite Glossary Bibliography Authors Biographies Index
