science and the scope of resources available we believe the NCA did a reasonable job of fulfilling its charge overall. Although more needs to be done to fully meet the nation's needs for information and guidance, such needs cannot be met without an expanded research effort on the part of the USGCRP and future assessments. The Panel suggests that the NCA report would be improved by addressing the numerous specific problems and concerns and the more cross-cutting issues raised in the consensus answers to the Task Statement questions, which include for instance the need to 1) provide a clear overarching framework for the report that helps readers understand climate change as part of a complex system with interacting physical, biological, and human social economic dimensions and offers practical guidance on using iterative risk management strategies to make decisions in the face of large uncertainties; 2) clearly acknowledge how climate change affects and is affected by other types of major global environmental changes and other societal developments; 3) offer an explicit discussion about the uncertainties associated with the regional model projections presented in the NCA draft; 4) take full advantage of the e-book format planned for this document through strategic use of hyperlinks among different parts of the report and other innovative approaches that help guide the experience of the NCA's diverse audiences. As the nation continues to engage with the threats, opportunities, and surprises of climate change in its many manifestations, the 2013 NCA should prove to be a valuable resource as a summary of the state of knowledge about climate change and its implications for the American people.
