Lewis, John L. Heckscher, ROME AIR DEVELOPMENT CENTER GRIFFISS AFB NY., 1982 A detailed step by step description is given of the exact solution of the boundary value problem of calculating the fields of a uniform sinusoidally varying straight line current flowing at a fixed height above a flat homogeneous earth of arbitrary dielectric constant and conductivity The solution satisfies Maxwell's equations and boundary conditions reduces to Ampere's Law at the current itself and hence includes the radiation fields The results contain integrals with infinite limits but these can be evaluated numerically in specific cases of interest As an example the resistivity induced in a wire 10 m above the earth of 1 1000 mho/m conductivity is calculated for a frequency of 35 kHz Author *An Introduction to the Locally-Corrected Nystrom Method* Andrew Peterson, Malcolm Bibby, 2009-11-08 This lecture provides a tutorial introduction to the Nyström and locally corrected Nyström methods when used for the numerical solutions of the common integral equations of two dimensional electromagnetic fields These equations exhibit kernel singularities that complicate their numerical solution Classical and generalized Gaussian quadrature rules are reviewed The traditional Nyström method is summarized and applied to the magnetic field equation for illustration To obtain high order accuracy in the numerical results the locally corrected Nyström method is developed and applied to both the electric field and magnetic field equations In the presence of target edges where current or charge density singularities occur the method must be extended through the use of appropriate singular basis functions and special quadrature rules This extension is also described Table of Contents Introduction Classical Quadrature Rules The Classical Nyström Method The Locally Corrected Nyström Method Generalized Gaussian Quadrature LCN Treatment of Edge Singularities **Electromagnetic Field Solution with the Boundary Element Method** Meng Hin Lean, 1981 *Solutions Manual for Elements of Electromagnetics* Matthew N.
