Engineering Mathematics - II, *Pattern Recognition in Bioinformatics* Madhu Chetty, Alioune Ngom, Shandar Ahmad, 2008-09-29 In the post genomic era a holistic understanding of biological systems and processes in all their complexity is critical in comprehending the choreography of life As a result bioinformatics involving its two main disciplines namely the life sciences and the computational sciences is fast becoming a very promising multidisciplinary research field With the ever increasing application of large scale high throughput technologies such as gene or protein microarrays and mass spectrometry methods the enormous body of information is growing rapidly Bioinformaticians are posed with a large number of difficult problems to solve arising not only due to the complexities in acquiring the molecular information but also due to the size and nature of the generated data sets and/or the limitations of the algorithms required for analyzing these data Although the field of bioinformatics is still in its embryonic stage the recent advancements in computational and information theoretic techniques are enabling us to conduct various in silico testing and screening of many lab based experiments before these are actually performed in vitro or in vivo These in silico investigations are providing new insights for interpretation and establishing a new direction for a deeper understanding Among the various advanced computational methods currently being applied to such studies the pattern recognition techniques are mostly found to be at the core of the whole discovery process for apprehending the underlying biological knowledge Thus we can safely surmise that the going bioinformatics revolution may in future inevitably play a major role in many aspects of medical practice and/or the discipline of life sciences
