Intel Linux Nvme Driver:

Data Plane Development Kit (DPDK) Heqing Zhu,2020-11-19 This book brings together the insights and practical experience of some of the most experienced Data Plane Development Kit DPDK technical experts detailing the trend of DPDK data packet processing hardware acceleration packet processing and virtualization as well as the practical application of DPDK in the fields of SDN NFV and network storage The book also devotes many chunks to exploring various core software algorithms the advanced optimization methods adopted in DPDK detailed practical experience and the guides on how to use DPDK Algorithms and Architectures for Parallel Processing Yongxuan Lai,Tian Wang,Min Jiang,Guangquan Xu,Wei Liang,Aniello Castiglione,2022-02-22 The three volume set LNCS 13155 13156 and 13157 constitutes the refereed proceedings of the 21st International Conference on Algorithms and Architectures for Parallel Processing ICA3PP 2021 which was held online during December 3 5 2021 The total of 145 full papers included in these proceedings were carefully reviewed and selected from 403 submissions They cover the many dimensions of parallel algorithms and architectures including fundamental theoretical approaches practical experimental projects and commercial components and systems The papers were organized in topical sections as follows Part I LNCS 13155 Deep learning models and applications software systems and efficient algorithms edge computing and edge intelligence service dependability and security algorithms data science Part II LNCS 13156 Software systems and efficient algorithms parallel and distributed algorithms and applications data science edge computing and edge intelligence blockchain systems deep learning models and applications IoT Part III LNCS 13157 Blockchain systems data science distributed and network based computing edge computing and edge intelligence service dependability and security algorithms software systems and efficient algorithms **Principles of Database and Solid-State Drive Co-Design** Alberto Lerner,Philippe Bonnet,2024-12-06 This book offers a comprehensive resource on Solid State Drives SSD as the field undergoes a radical evolution characterized by the incredible variety of SSD forms and their rapid diversification It proposes a new classification system to help readers navigate the SSD landscape For years the evolution of SSDs was obscured by the unchanging abstractions of block devices and POSIX I O but it is apparent that these abstractions have become a problematic hinderance to performance and also fail to reduce software complexity The book explores how such a state of affairs impacts the database community in at least two ways First it considers how using SSDs through legacy interfaces that hide internal mechanisms invariably results in erratic performance While the blame often goes to the notoriously expensive garbage collection of SSDs the authors argue that in truth several other complex processes result in nonlinear effects on latency and bandwidth The book describes these processes and how they are implemented in modern devices knowledge that will help system designers better choose SSDs and shape database workloads to match their performance characteristics Second the book explores how the inadequacy of the traditional I O abstractions opens up an entire research field focused on the co design of database management systems and SSD Such

research aims at devising mechanisms and policies coupling the storage manager of database and SSD internals e.g. placing an SSD FTL under the control of database changing SSD sub systems in response to the workload or executing logic within an SSD on a database's behalf The book introduces these principles of DBMS SSD co design and argues that a more seamless integration of databases and storage solutions as well as the study of SSD variations adapted to database computations are central to the development of the next generation of database systems
