

Slip Casting Process-1a

Installing Clay Tube

The joining of the clay tube to the basin is most successfully achieved when done immediately after the Basin is drained.

The tube is designed to allow the electrical cord for the fountain pump to exit the basin above the fountain's water level.

Therefore not modification to the fountain pump is needed.

A Separate Casting

A separate casting is made of a clay tube that will be attached to the interior of the basin immediately after the basin is drained.
