Liskov,John Guttag,1986 Abstraction and Specification in Program Development offers professionals in program design and software engineering a methodology that will enable them to construct programs that are reliable and reasonably easy to understand modify and maintain Good programming involves the systematic mastery of complexity and this book provides the first unified treatment of the techniques of abstraction and specification which the authors argue are the linchpin of any effective approach to programming They place particular emphasis on the use of data abstraction to produce highly modular programs The authors focus on the process of decomposing large program projects into independent modules that can be assigned to independent working groups They discuss methods of decomposition the kinds of modules that are most useful in this process and techniques to increase the likelihood that modules produced can in fact be recombined to solve the original programming problem There are many examples of abstractions throughout the text and each chapter ends with pertinent references and exercises Most of the sample implementations in the book are written in CLU one of a growing number of languages able to support data abstraction Sufficient material is included however to allow the reader to work in Pascal as well The material in this book was developed by the authors during a decade of teaching undergraduate graduate and professional level courses Barbara Liskov the developer of CLU is Professor and John Guttag an Associate Professor of Computer Science at MIT Abstraction and Specification in Program Development is included in the MIT Electrical Engineering and Computer Science series   *Annual Review in Automatic Programming* Richard Goodman,2014-05-15 Annual Review in Automatic Programming is a collection of papers presented at the Working Conference on Automatic Programming of Digital Computers held in Brighton UK on April 1 3 1959 Contributors focus on developments in automatic programming and cover topics ranging from automatic coding for TREAC to the PEGASUS and MERCURY autocodes automatic programming of DEUCE and the philosophy of programming Business applications of automatic programming are also discussed This book is comprised of 17 chapters and begins with a review of future trends in automatic programming focusing on the environment of a computer as well as machine languages and automatic codes The features of existing automatic programming languages are also described along with the advantages and disadvantages of such languages The next chapter presents some of the arguments in favor of standardized notations for programming mainly with reference to scientific problems The reader is also introduced to the Mark 5 system of automatic coding for TREAC assembly interpretive and conversion programs for PEGASUS and application of formula translation to the automatic coding of ordinary differential equations The final chapter describes a machine designed for the manufacture of accurate models for wind tunnel tests This monograph will be of interest to computer programmers computer manufacturers computer users and university students   *Unifying Theories of Programming* ,2010   **A Primer of Algol 60 Programming** E.
