BIM-based Life Cycle Information Management Rui Liu,2012 The AEC industry has raised a good deal of interest surrounding the use of BIM for facility management The opportunities for leveraging BIM for facility operations are compelling but the utilization of BIM in facility management is lagging behind BIM

implementation in the design and construction phases On one hand designers and constructors seldom know what documents and other varieties of information are needed for the facility management phase On the other hand a limited degree of experience in the operation and maintenance knowledge of these existing buildings is fed back to the design phase This research is aimed to bridge the communication gap between design and facility management professionals Through available BIM extension development tools information exchange and knowledge sharing can be attained for both these essential partners in the construction industry The expected result would be a platform that can transfer information bi directionally between design and facility management professionals Through literature review interviews and surveys with industry professionals the requirements for facility operation and maintenance were determined A facility management template has been developed¹³ that carries the information needed by facility managers as well as a predefined list for maintenance management in design tools such as Revit Moreover for maintainability checking rule sets for model checker applications to gauge the accessibility of maintenance activity were created by using the Revit API and Solibri Model Checker A relief fan case of accessibility problems was studied to illustrate and validate the Revit Add In tool Accessibility Checker
