Separation of Molecules, Macromolecules and Particles Kamallesh K. Sirkar, 2014-01-16 Providing chemical engineering undergraduate and graduate students with a basic understanding of how separation of a mixture of molecules, macromolecules or particles is achieved, this textbook is a comprehensive introduction to the engineering science of separation. Students learn how to apply their knowledge to determine the separation achieved in a given device or process. Real world examples are taken from biotechnology, chemical, food, petrochemical, pharmaceutical and pollution control industries. Worked examples, elementary separator designs and chapter end problems are provided, giving students a practical understanding of separation. The textbook systematically develops different separation processes by considering the forces causing the separation and how this separation is influenced by the patterns of bulk flow in the separation device. Readers will be able to take this knowledge and apply it to their own future studies and research in separation and purification. Online resources include solutions to the exercises and guidance for computer simulations.

Downstream Processing and Bioseparation Jean-François Hamel, Jean B. Hunter, Subhas K. Sikdar, American Chemical Society, Division of Industrial and Engineering Chemistry, 1990. This new volume examines the state of the art of several important separation processes as they relate to biotechnology. Focusing on isolation and purification of downstream processing, it presents recent research results of several promising techniques. Its 15 chapters cover extraction and membrane processing processes using biospecific interaction with proteins and novel isolation and purification processes. Many of the chapters contain data that have not been published before. This volume presents the spectrum of current thinking and activities on bioseparation, specifically of large molecules such as proteins and polysaccharides.
