**The Child Health Implications of Privatizing Africa's Urban Water Supply** Katrina Kosec, 2013-05-10 Identifying policies which can improve water sector management is critically important given the global burden of water related disease Each year 1 in 10 child deaths roughly 800 000 in total is the direct result of diarrhea Can private sector participation PSP in the urban piped water sector improve child health The author uses child level data from 39 African countries during 1986 2010 to show that introducing PSP decreases diarrhea among urban dwelling children under five years of age by 5 6 percentage points or 35 percent of its mean prevalence PSP also leads to greater reliance on piped water To attribute causality the author exploits time variation in the private water market share controlled by African countries former colonizers A placebo analysis reveals that PSP does not affect symptoms of respiratory illness in the same children nor does it affect a rural control group unaffected by PSP

**The Political Economy of Publicly-provided Goods** Katrina Lauren Kosec,2011 This dissertation consists of three chapters which explore various aspects of the political economy of publicly provided goods I shed light on why governments do or do not invest in goods of different types and also how government versus private provision affects consumers What follows are three empirical analyses testing the implications of competing theoretical models My first chapter addresses the question what drives governments with similar revenues to publicly provide very different amounts of goods for which private substitutes are available Key examples are education and health care I compare spending by Brazilian municipalities on pre primary education a good that is also provided privately with spending on public infrastructure like parks and roads which lacks private substitutes I find that municipalities with higher median income and more inequality are less likely to allocate revenue to education or to expand pre primary enrollment They are more likely to allocate revenue to public infrastructure This seems to occur for two reasons In rich and unequal municipalities fewer total people support public education spending the collective choice channel and also any given poor person wanting public education has less influence over policymakers there the political power channel My second chapter addresses the question can private sector participation PSP in the urban piped water sector improve child health A fixed effects analysis suggests that the introduction of PSP decreases diarrhea among under five children by between 2.2 and 2.6 percentage points or 14-16% An instrumental variables analysis that uses variation in the share of the world water market controlled by former colonizing countries suggests that the effects are twice as large The difference between the OLS and the IV results can be explained by the fact that PSP is more likely when the water sector is distressed

and causing health problems. Importantly, PSP appears to benefit the health of children from the poorest households the most. It also leads to higher rates of reliance on piped water as the primary water source, which is a likely channel explaining child health improvements. My third chapter, joint with John Hatfield, examines how competition between governments affects economic growth. We find that doubling the number of local governments in a metropolitan area increases the income growth rate over 1969-2006 by 18%, which implies an approximate 3900 difference in 2006 income. Decomposing this effect, we find that 60% stems from inter-jurisdictional competition changing the composition of the workforce, while 40% comes from making existing workers more productive. The results support a formal model showing that competition for capital drives local governments to provide productive public goods at levels which maximize economic growth. Hatfield 2010

Changes in energy markets over the last decade have made capacity planning by electric utilities increasingly difficult but also increasingly important to producers and users of energy. In particular, long-range forecasts of the use of electricity have received greater scrutiny. Forecasting problems and methods have become more complex, and results have been subject to greater uncertainty and challenge than before. EPRI in the Energy Modeling Forum brought together a working group from utilities, research institutes, government agencies, universities, and consulting firms to identify the issues that could have significant impacts on future electricity consumption.
