*Ethnography for Designers* Galen Cranz,2016-02-26 *Ethnography for Designers* teaches architects and designers how to listen actively to the knowledge people have about their own culture This approach gives structure to values and qualities It does this by noting the terms and underlying structure of thought people use to describe aspects of their culture By responding to underlying cognitive patterns the architect can both respond to the user and interpret creatively Thus ethno semantic methods can help designers to enhance their professional responsibility to users and at the same time to feel fulfilled creatively This book is a practical guide for those teaching social factors and social research methods to designers and for those using these methods in practice      **The WISE Journal** Klaudio Muca,Carsten Primdahl,2022-03-09 The WISE Journal investigates the dynamic relationship between architecture humans and human activities in learning and work environments The publication brings into conversation different scientific disciplines and some of the world s foremost thinkers This extensive mixed media journal offers its readers food for thought on how to translate this cross disciplinary exploration into fulfilling long lasting architecture intentionally stimulating spaces that support productivity learning and well being The e book contains a series of interviews in video and podcast format alongside numerous illustrations that support articles case studies and essays For in depth readers the publication provides hundreds of pages of text with thorough references to peer reviewed articles Education institutions should remember that their ultimate customer is not the students nor their parents but society at large The WISE Journal beautifully demonstrates the intricate impact that education has on space skills and society Ben Nelson Founder Minerva University The WISE Journal has identified a set of important topics whose relationship to one another can benefit from appropriate examples and thoughtful reflections Howard Gardner Harvard Graduate School of Education The WISE Journal brings into conversation the many diverse disciplines involved in the design of intentional spaces This cross pollination of research theory insights and practice is essential to advancing architecture for wellbeing and lifelong learning Susan Magsamen Executive Director International Arts Mind Lab

**Assessing Library Space for Learning** Susan E. Montgomery,2017-08-01 With the surge in electronic access to the

library's resources there has been an ongoing discussion about the need for a physical library building. On a college or university campus the library is a destination for its users. Students, faculty, and staff go to the library for various reasons. Their usage makes the academic library a valuable learning space on campus. However, not much is known about how the library space contributes to user learning. In *Assessing Library Space for Learning*, chapters discuss library usage at academic institutions and how that usage is an integral part of the student learning experience. Included are the perspectives of an architect who is tasked with designing library spaces with learning in mind, a psychologist whose professional research focuses on the concept of place, and a dynamic group of academic librarians who are dedicated to making the library conducive to the needs of their learners. This book is a combination of theory, practical, and research-based chapters with an overall focus on the intersection of library space and learning. The authors demonstrate the importance of the library space in our users' lives. In addition, the authors discuss the importance of determining ways to learn how library space contributes to user learning. Readers will gain an understanding of the library space as a valuable learning space and the steps librarians need to take to assess learning in the academic library. *The Public Space of Social Media* Therese Tierney, 2013-08-29

Social media is restructuring urban practices through ad hoc experimentation, commercial software development, and communities of participation. This book is the first to consider how practices contained within social media are situated within a larger genealogy of public space, including theories of communal identity, *civitas*, and democracy, the *fete*, and self-expression. Through empirical research, the actual social practices of participants of networked publics are described and analyzed. Documenting how online counterpublics use the Internet to transmit classified photos, mobilize activists, and challenge the status quo, Tierney argues that online activities do not stop in online conversations; they are physically grounded through mobile GPS coordinates which are then transformed into activities in physical space: the street, the plaza, the places where people have traditionally gathered to demonstrate and express their opinions publicly. *Strategic Spatial Projects* Stijn Oosterlynck, Jef Van den Broeck, Louis Albrechts, Frank Moulaert, Ann Verhetsel, 2010-11-18

*Strategic Spatial Projects* presents four years of case study research and theoretical discussions on strategic spatial projects in Europe and North America. It takes the position that planning is not well equipped to take on its current challenges if it is considered as only a regulatory and administrative activity. There is an urgent need to develop a mode of planning that aims to innovate in spatial as well as social terms. This timely important book is for spatial planning, urban design, and community development and policy studies courses. For academics, researchers, and students in planning, urban design, urban studies, human and economic geography, public administration, and policy studies. *Analogical Thinking in Architecture* Jean-Pierre Chupin, 2023-07-27

This book provides an in-depth exploration of the rich and persistent use of analogical thinking in the built environment. Since the turn of the 21st century, design thinking has permeated many fields outside of the design disciplines. It is expected to succeed whenever disciplinary boundaries need to be transcended in order to think outside the box. This book argues that

these qualities have long been supported by analogical thinking an agile way of reasoning in which think the unknown through the familiar The book is organized into four case studies the first reviews analogical models that have been at the heart of design thinking representations from the 1960s to the present day the second investigates the staying power of biological analogies the third explores the paradoxical imaginary of analogous cities as a means of integrating contemporary architecture with heritage contexts while the fourth unpacks the critical and theoretical potential of linguistic metaphors and visual comparisons in architectural discourse Comparing views on the role of analogies and metaphors by prominent voices in architecture and related disciplines from the 17th century to the present the book shows how the analogical world of the project is revealed as a wide open field of creative and cognitive interactions These visual and textual operations are explained through 36 analogical plates which can be read as an inter text demonstrating how analogy has the power to reconcile design and theories
