

Chapter 1: Introduction to Thermofluid

Objectives:

- (1) Understand the scope of studies in the field of Thermofluid
- (2) Explain and apply the following Basic Concepts of Thermofluid;
 - System
 - Surroundings
 - Boundary
 - Properties of a System
 - State of Equilibrium
 - Work Transfer
 - Heat Transfer
- (3) Appreciate the correlation between Thermodynamics and Fluid Mechanics

1.1 Introduction

Thermofluids is a branch of science and engineering that consist of 4 intertwined field of studies: Thermodynamics, Fluid Mechanics, Heat Transfer and Combustion. The word 'Thermo' refers to heat and 'Fluid' refers to liquid, gas or vapor. In this module, we shall focus on the Thermodynamics and Fluid Mechanics aspect of things, in particular, the energy considerations for thermal and fluid (mass) transfer.

1.2 Basic Concept of Thermofluids

1.2.1 Definitions of a system

A **system** is defined as a collection of matter (fluid) within a prescribed region of interest. For example, Figure 1.1a, the fluid contained between the cylinder walls and the piston may be said to be the system. Another similar idea known as the **control volume** can be applied as shown in Figure 1.1b.

Surrounding is the region enclosing the system as shown in Figure 1.1a. The surroundings may interact with the system via energy or mass transfer.

Boundary is the surface that separates the system from the surroundings. Do note that the boundary can be either a physical (Figure 1.1a) one or an imaginary one (Figure 1.1b). In the context of Figure 1.1b, this boundary is referred to as a **control surface**.

Thermofluids Mahmoud Massoud,2005-09-16 Thermofluids while a relatively modern term is applied to the well established
field of thermal sciences which is comprised of various intertwined disciplines Thus mass momentum and heat transfer
constitute the fundamentals of th mofluids This book discusses thermofluids in the context of thermodynamics single and two
phase flow as well as heat transfer associated with single and two phase flows Traditionally the field of thermal sciences is
taught in univer ties by requiring students to study engineering thermodynamics fluid mechanics and heat transfer in that
order In graduate school these topics are discussed at more advanced levels In recent years however there have been
attempts to in grate these topics through a unified approach This approach makes sense as thermal design of widely varied
systems ranging from hair dryers to semicond tor chips to jet engines to nuclear power plants is based on the conservation
eq tions of mass momentum angular momentum energy and the second law of thermodynamics While integrating these
topics has recently gained popularity it is hardly a new approach For example Bird Stewart and Lightfoot in Transport
Phenomena Rohsenow and Choi in Heat Mass and Momentum Transfer El Wakil in Nuclear Heat Transport and Todreas and
Kazimi in Nuclear Systems have pursued a similar approach These books however have been designed for advanced graduate
level courses More recently undergraduate books using an tegral approach are appearing Introduction to Engineering
