1 Documentation

- You can access the Matlab help documentation through the blue-white question mark icon in the top bar.
- To get information about a specific command, type:
– `help command`.
- There are a number of free tutorials and other resources available online, e.g.
http://www.mathworks.com/help/getting-started/matlab/step_2pt.html
http://www.mathworks.com/help/getting-started/matlab/step_2pt.html
- Further Reading: *Applied Computational Economics and Finance* by Mario J. Miranda and Paul L. Fackler. On Fackler's Homepage, you can also download the so-called *CompEcon toolbox*, which contains a lot of useful functions.

2 Basics

2.1 Entering and displaying data

- Data is entered in Matlab in matrix form. For example, the 4×4 matrix

$$A = \begin{bmatrix} 16 & 3 & 2 & 13 \\ 5 & 10 & 11 & 8 \\ 9 & 6 & 7 & 12 \\ 4 & 15 & 14 & 1 \end{bmatrix}$$

is generated by typing:

```
– A = [16 3 2 13; 5 10 11 8; 9 6 7 12; 4 15 14 1];
```

To create a row vector type:

```
– B = [1 2 3 4]
```

For a column vector type:

```
– C = [1; 2; 3; 4]
```

A scalar is a 1×1 matrix:

```
– D = 5
```

- Note the following:
 - The `'='` assigns a value to (the variable) `A` or, in other words, it stores the matrix in the workspace under the name `A`;
 - To enter a matrix, use `[]`;
 - `','` ends a row; within a row, `' '` indicates a new column.
- To change a variable, just assign a new value to it:
– `C = [2; 3; 4; 5];`

You can also assign a new value by using the old:

Random Signals and Processes Primer with MATLAB Gordana Jovanovic Dolecek, 2012-08-21 This book provides anyone needing a primer on random signals and processes with a highly accessible introduction to these topics It assumes a minimal amount of mathematical background and focuses on concepts related terms and interesting applications to a variety of fields All of this is motivated by numerous examples implemented with MATLAB as well as a variety of exercises at the end of each chapter

MATLAB® for Photomechanics- A Primer A. Asundi, 2002-12-10 The term photomechanics describes a suite of experimental techniques which use optics photo for studying problems in mechanics The field has been in existence for some time but has always lagged behind other experimental and numerical techniques The main reason for this is that the interpretation of data which whilst providing whole field visualization is not in a form readily amenable to the end user Digital image processing has become common within the photomechanics community However one approach does not fit all and subtle variations in technique and method have been developed by different groups working on specific applications This primer enables the user to get started with their experimental analysis quickly It is based on the universally popular MATLAB software which includes dedicated and optimized functions for a variety of image processing tasks These can readily scripted along with the necessary mathematical expressions for particular experimental techniques The book provides an introduction to some of the optical techniques and then introduces MATLAB routines specific to the image processing in experimental mechanics There are also case studies on particular techniques As part of the book a collection of M files is provided on CD ROM which also contains example images and test code This provides a starting point for the user who can then easily add or edit statements or function for their own images MATLAB is a registered trademark of The MathWorks Inc For product information visit <http://www.mathworks.com>
