Dynamic Language Embedding Lukas Renggli,2010-09-24 In this dissertation we present Helvetia a novel approach to embed languages into an existing host language by leveraging the underlying representation of the host language used by these tools We introduce Language Boxes an approach that offers a simple modular mechanism to encapsulate i

compositional changes to the host language ii transformations to address various concerns such as compilation and syntax highlighting and iii scoping rules to control visibility of fine grained language changes We describe the design and implementation of Helvetia and Language Boxes discuss the required infrastructure of a host language enabling language embedding and validate our approach by case studies that demonstrate different ways to extend or adapt the host language syntax and semantics Domain Specific Languages Martin Fowler,2010 **Software Languages** Ralf
