

Problem 3.1 Solving Equations Using Tables and Graphs

A. Use the equation $A = 5 + 0.5d$.

1. Suppose Alana walks 23 kilometers. Show how you can use a table and a graph to find the amount of money Alana gets from each sponsor.

In the table, you can find 23 in the “d” column (independent variable) and read across to the right to find out the amount of money in the “A” column (dependent variable).

In the graph, you find 23 on the x-axis and follow the grid up to find the point on the line. Then you follow the grid across to see what the amount of money is on the y-axis.

2. Suppose Alana receives \$60 from a sponsor. Show how you can use a table and a graph to find the number of kilometers she walks.

In the table you can find 60 in the “A” column (dependent variable), then read across to the left to find out how many km she walked in the “d” column(independent variable).

In the graph, you find \$60 on the y-axis and follow the grid across to find the point on the line. Then you follow the grid down to see how many km Alana walked on the x-axis.

B. For each equation:

- Tell what information Alana is looking for.
- Describe how you can find the information.

1. $A = 5 + 0.5(15)$

Alana is trying to figure out how much money she would earn from a sponsor if she walked 15 kilometers. You can figure this out by multiplying $0.5 \cdot 15$, then adding 5 to that product. You could also use the graph or table as described in the previous problem to find the missing “A” value. In this case, she would earn \$12.50.

2. $50 = 5 + 0.5d$

Alana is trying to figure out how many kilometers she needs to walk in order to earn \$50. You can figure this out by using the table or graph (find 50 in the
