A Practical Guide to the Invariant Calculus Elizabeth Louise Mansfield,2010-04-29 This book explains recent results in the theory of moving frames that concern the symbolic manipulation of invariants of Lie group actions In particular theorems concerning the calculation of generators of algebras of differential invariants and the relations they satisfy are discussed in detail The author demonstrates how new ideas lead to significant progress in two main applications the solution of invariant ordinary differential equations and the structure of Euler Lagrange equations and conservation laws of variational problems The expository language used here is primarily that of undergraduate calculus rather than differential geometry making the topic more accessible to a student audience More sophisticated ideas from differential topology and Lie theory are explained from scratch using illustrative examples and exercises This book is ideal for graduate students and researchers working in differential equations symbolic computation applications of Lie groups and to a lesser extent differential geometry

Practical Methods for Optimal Control and Estimation Using Nonlinear Programming John T. Betts,2010-01-01 The book describes how sparse optimization methods can be combined with discretization techniques for differential algebraic equations and used to solve optimal control and estimation problems The interaction between optimization and integration is emphasized throughout the book
