the amount of copper and a multiple of cobalt are required to manufacture a pure electronic car in comparison to a car with a combustion engine The situation is also reflected in the price of the raw materials Copper prices increased by over 50% in the past years and cobalt even tripled based on the levels of 2016 While only a high technological process can be used to mine lithium cobalt and copper can be found directly within the soil and therefore it does not require a plant to obtain smaller amounts of the raw materials The possibility of simple and zero cost production combined with high metal prices makes it very profitable for small miners to search for those minerals by hand This so called artisanal mining is very common especially in undeveloped countries with low economic status and a high poverty rate Artisanal mining in such areas is practiced under inhumane conditions oftentimes even including child labor The question arises how EV supply chains can be traced down to prohibit unethicaly sourced material from entering the supply chain Simultaneously another megatrend which is mentioned in the media a lot of times in the past couple of years is distributed ledger technologies DLTs mostly known due to the term blockchain and the cryptocurrency Bitcoin One technology which is standing out is the IOTA Tangle The Tangle has a different approach to most known blockchain architectures and claims to solve the problems they face The question arises if the IOTA Tangle could solve the problem of electronic vehicle supply chains while being cost effective and scalable at the same time suiting the requirements of today s supply chains Therefore the following research questions are addressed What potentials do Distributed Ledger Technologies DLT have and what is the reason for that How does the IOTAs Tangle differ from blockchain solutions what makes its design unique and what are the advantages What could be an effective process for companies to trace electronic vehicle supply chains utilizing the IOTA Tangle to solve the problems of artisanal mining   **Real-time Integration of IoT Sensor and IOTA Tangle for Securing IoT Infrastructure** Md Abdullah Al Mamun,2021 In recent years the Internet of Things IoT has seen tremendous growth The fast growing IoT field is facing many security issues because infrastructure configuration and security policies employed in this nascent field have not matured yet In this research we argue that the security issues on IoT can be solved using Distributed Ledger Technology DLT The integration of IoT devices and Distributed Ledger Technology is getting more recognition in distributed device settings In a Distributed Ledger IoT environment DLT manages a distributed public ledger that stores the communication and transaction data of multiple parties without requiring a trusted central authority A prime example of the IoT and DLT integration is the IOTA Tangle IOTA Tangle is a new and world s first distributed ledger technology specially developed for IoT devices In its core structure it stores data in a directed acyclic graph IOTA is not only built to ensure secure communication among the IoT devices but also to provide some extra leverage to the IoT devices compared to the traditional blockchains Regular blockchains have dedicated miners and they are mostly fee dependent for making any kind of transaction IOTA ledger is more scalable has neither transaction fees nor traditional miners and it also has the technology to protect the network against Quantum Computer s attack Before widely bringing the IoT devices into the IOTA network we

need to justify the feasibility of IoT and IOTA integration making a use case prototype to ensure the security of the IoT devices in real time experiments Hence the main goal of this research is to integrate IoT sensor devices and IOTA Tangle to scale up the security of the IoT infrastructure and at the same time execute an efficiency test of the network   **The International Interpreter** ,1922   **The International Interpreter** Frederick Dixon,1924   **The Sketch** ,1913   **Quarterly of the Phi Beta Pi Medical Fraternity** ,1920   *High School Life* ,1920
