A Practical Manual of Pediatric Dentistry Dr. K. Srinivasan, 2019-12-27 Diagnosis is not the end but the beginning of practice Martin H Fischer Pediatric dentistry is a continuous evolving field like any other fields of dentistry Children are not miniature adults and their growth and developmental considerations demand special attention in diagnosis prognosis and treatment of diseases Taking a history from a patient is a skill necessary for examinations and afterwards as a practicing doctor no matter which area you specialize in It tests both your communication skills as well as your knowledge about what to ask Specific questions vary depending on what type of history you are taking but if you follow the general framework below you should gain good marks in these stations This is also a good way to present your history A good history is one which reveals the patient's ideas concerns and expectations as well as any accompanying diagnosis The doctor's agenda incorporating lists of detailed questions should not dominate the history taking Listening is at the heart of good history taking Without the patient's perspective the history is likely to be much less revealing and less useful to the doctor who is attempting to help the patient In practice you may sometimes need to gather a collateral history from a relative friend or carer This may be with a child or an adult with impaired mental state The use of jargon has become very common in the healthcare field especially in Medical Dental records Although the use of standard Medical Jargon can be seen as professional efficient shorthand a lack of awareness regarding the standard medical abbreviations and incessant and overzealous use of slang among the healthcare professionals can act as a barrier to effective communication and understanding among patients and peers The use of a pre printed Dental Medical history questionnaire can serve a valuable role in taking and documenting history and clinical examination of a patient and formulation of a treatment plan This manual is an effort in that direction This book written in concise and clear language written on how to successfully record a case history including indices and planning of treatment by dental students and is intended to fill that lacuna

Demineralization and Remineralization of Teeth
Dr. Shandar Siddiqui, Dr. Imran Saba, 2020-10-14 Dental caries is defined as a multifactorial transmissible infectious oral disease caused primarily by the complex interaction of cariogenic oral flora biofilm with fermentable dietary carbohydrates on the tooth surface over time At the tooth surface and sub surface level dental caries results from a dynamic process of attack demineralization and restitution remineralization of the tooth matter It is essential to understand that carious lesions or cavitations in teeth are signs of an underlying condition an imbalance between protective factors i e those favouring remineralization and pathologic factors i e those favouring demineralization balance tilting towards the latter In clinical practice it is very easy to lose sight of this fact and focus entirely on the restorative treatment of caries lesions failing to treat the underlying cause of the disease
