Control in Well Construction and Operation Davorin Matanovic,Marin Cikes,Bojan Moslavac,2012-02-21 Produced sand
causes a lot of problems From that reasons sand production must be monitored and kept within acceptable limits Sand
control problems in wells result from improper completion techniques or changes in reservoir properties The idea is to
provide support to the formation to prevent movement under stresses resulting from fluid flow from reservoir to well bore
That means that sand control often result with reduced well production Control of sand production is achieved by reducing
drag forces the cheapest and most effective method mechanical sand bridging screens gravel packs and increasing of
formation strength chemical consolidation For open hole completions or with un cemented slotted liners screens sand failure
will occur and must be predicted Main problem is plugging To combat well failures due to plugging and sand breakthrough
