NN – NN – NN – DD – DD – DD or NN:NN:NN:DD:DD:DD where the first half (NN – NN – NN) is the identity number of the manufacturer of the device and the second half (DD – DD – DD) is the serial number of the device. [2 marks]

ii Since it is much easier to work with: B5A41AFC rather than: 10111001101001000001101011111100

hexadecimal is often used when developing new software or when trying to trace errors in programs.

A program developer can look at each of the hexadecimal codes (as shown in Figure 1.7 of the textbook) and determine where the error lies. The value on the far left shows the memory location so that it is possible to find out exactly where in memory the fault occurs. [2 marks]

iii HTML code is often used to represent colours of text on the computer screen. The values change to represent different colours. The different intensity of the three primary colours (red, green and blue) is determined by its hexadecimal value. For example:  
# FF 00 00 represents primary colour red  
# 00 FF 00 represents primary colour green  
# 00 00 FF represents primary colour blue [2 marks]
