Problem 1: Liquid Pressure
Continuation of Page 100

As you worked with the liquid pressure apparatus, you noticed that pressure increases with depth. This is because the weight of the liquid above exerts a downward force on the liquid below. The pressure at any point in a liquid is due to the weight of the liquid above it. The pressure is the same in all directions at any point in a liquid. The pressure at a point in a liquid is given by the equation $P = \rho gh$, where P is the pressure, ρ is the density of the liquid, g is the acceleration due to gravity, and h is the depth of the liquid.
