*MODELING OF THE PHASE CHANGE MATERIAL OF A HYBRID STORAGE USING THE FINITE ELEMENT METHOD*

Lukas Kasper ,2020-09-03 To increase the efficiency of energy intensive industrial processes thermal energy storages can offer new possibilities A novel approach is investigated in the project HyStEPs In this concept containers filled with PCM are placed at the shell surface of a Ruths steam storage to increase storage efficiency In this work a two dimensional model using the finite element method is developed to simulate the PCM of the hybrid storage as designed in the HyStEPs project The apparent heat capacity method is applied in a MATLAB implementation considering heat transfer by both conduction and natural convection This successfully validated code can handle any desired layout of materials arranged on a rectangular domain Furthermore a parameter study of different dimensions and orientations of the PCM cavity was conducted The impact of natural convection was found to lead to significantly varying behaviour of the studied cavities with different orientation during the charging process while it was found to be negligible during the discharging process
