Magician of Sound Jessie Fillerup,2021-04-20 French

composer Maurice Ravel was described by critics as a magician conjurer and illusionist. Scholars have been aware of this historical curiosity but none so far have explained why Ravel attracted such critiques or what they might tell us about how to interpret his music. *Magician of Sound* examines Ravel's music through the lens of illusory experience, considering how timbre, orchestral effects, figure-ground relationships, and impressions of motion and stasis might be experienced as if they were conjuring tricks. Applying concepts from music theory, psychology, philosophy, and the history of magic, Jessie Fillerup develops an approach to musical illusion that newly illuminates Ravel's fascination with machines and creates compelling links between his music and other forms of aesthetic illusion, from painting and poetry to fiction and phantasmagoria. Fillerup analyzes scenes of enchantment and illusory effects in Ravel's most popular works, including *Bolero*, *La Valse*, *Daphnis et Chloé*, and *Rapsodie espagnole*, relating his methods and musical effects to the practice of theatrical conjurers. Drawing on a rich well of primary sources, *Magician of Sound* provides a new interdisciplinary framework for interpreting this enigmatic composer, linking magic and music.

Mathemusical Conversations: Mathematics And Computation In Music Performance And Composition Elaine

Chew, Gerard Assayag, Jordan B L Smith, 2016-07-21. *Mathemusical Conversations* celebrates the understanding of music through mathematics and the appreciation of mathematics through music. This volume is a compilation of the invited talks given at the *Mathemusical Conversations* workshop that took place in Singapore from 13-15 February 2015, organized by Elaine Chew in partnership with Gerard Assayag for the scientific program and with Bernard Lanskey for the artistic program. The contributors are world experts and leading scholars writing on the intersection of music and mathematics. They also focus on performance and composition, two topics which are foundational both to the understanding of human creativity and to the creation of tomorrow's music technologies. This book is essential reading for researchers in both music and mathematics. It will also appeal more broadly to scholars, students, musicians, and anyone interested in new perspectives on the intimate relationship between these two universal human activities.

Physics and Mathematics in Musical Composition Kinko Tsuji, Stefan C. Müller, 2025-07-02 How is music born Is music made by humans or does it already exist and wait to be found How do composers create or find music Having these questions in mind the authors ask more questions How can we share our feelings with other people when listening to music Can these be visualized Why did Helmholtz have a problem with the third Why is precise tuning so important in European music and less so in other cultures What are the differences among the continents What makes dissonant tone intervals uncomfortable in many cases What enables us to distinguish the music of Mozart from that of Beethoven Why are we fascinated by birdsong Why does some music survive whereas other just disappears And finally along which lines will music develop in the future Drawing upon physics and mathematics the authors search for answers to these questions and attempt to unravel in some depth the enigmas of how our minds are affected by the perception of music
