Inductive Biases in Machine Learning for Robotics and Control Michael Lutter, 2023-07-31 One important robotics problem is How can one program a robot to perform a task Classical robotics solves this problem by manually engineering modules for state estimation planning and control In contrast robot learning solely relies on black box models and data This book shows that these two approaches of classical engineering and black box machine learning are not mutually exclusive To solve tasks with robots one can transfer insights from classical robotics to deep networks and obtain better learning algorithms for robotics and control To highlight that incorporating existing knowledge as inductive biases in machine learning algorithms improves performance this book covers different approaches for learning dynamics models and learning robust control policies The presented algorithms leverage the knowledge of Newtonian Mechanics Lagrangian Mechanics as well as the Hamilton Jacobi Isaacs differential equation as inductive bias and are evaluated on physical robots

Advances in Motion Sensing and Control for Robotic Applications Farrokh Janabi-Sharifi, William Melek, 2019-06-15 This book reports on advances in sensing modeling and control methods for different robotic platforms such as multi degree of freedom robotic arms unmanned aerial vehicles and autonomous mobile platforms Based on 2018 Symposium on Mechatronics Robotics and Control SMTRC 18 held as part of the 2018 CSME International Congress in York University Toronto Canada the book covers a variety of topics from filtering and state estimation to adaptive control of reconfigurable robots and more Next generation systems with advanced control planning perception and interaction capabilities will achieve functionalities far beyond today's technology Two key challenges remaining for advanced robot technologies are related to sensing and control in robotic systems Advanced perception is needed to navigate changing environments Adaptive and intelligent control systems must be developed to enable operation in unstructured and dynamic environments Theselected chapters in this book focus on both of the aforementioned areas and highlight the main trends and challenges in robot sensing and control The first part of the book introduces chapters which focus on advanced perception and sensing for robotics applications They include sensor filtering and state estimation for bipedal robots and motion capture systems analysis The second part focuses on different modeling and control methods for robotic systems including flight control for UAVs multi variable robust control for modular and reconfigurable robotics and control for precision micromanipulation

Vehicle Suspension Systems and Electromagnetic Dampers Saad Kashem, Romesh Nagarajah, Mehran Ektesabi, 2017-09-04 This book describes the development of a new analytical full vehicle model with nine degrees of freedom which uses the new modified skyhook strategy SKDT to control the full vehicle vibration problem The book addresses the incorporation of road bank angle to create a zero steady state torque requirement when designing the direct tilt control and the dynamic model of the full car model It also highlights the potential of the SKDT suspension system to improve cornering performance and paves the way for future work on the vehicle's integrated chassis control system Active tilting technology to improve vehicle cornering is the focus of numerous ongoing research projects but these don't consider the effect of road bank angle in the control system design or in the dynamic model of the tilting standard passenger vehicles The non incorporation of road bank angle creates a non zero steady state torque requirement
