Brunner,2003-02-01 This paper examines the dynamic relationship between trade and income While most economists agree that increased trade leads to an increase in average income economic theory is ambiguous about the possible effects on the

long run growth rate of the economy Using a dynamic panel data model the hypotheses of no long run effects of trade on income and on income growth are tested explicitly The possibility of endogeneity is addressed by constructing an instrument for trade by extending Frankel and Romer s 1999 cross sectional approach to the case of a panel data model The empirical results indicate that trade has a large and significant effect on the level of income but the effect on income growth is small and non robust to model specification JOURNAL OF FINANCIAL INTERMEDIATION ,2000 *Research Methods in Practice* Dahlia K. Remler, Gregg G. Van Ryzin, 2021-08-24 Thoroughly updated to reflect changes in both research and methods this Third Edition of Remler and Van Ryzin s innovative standard setting text is imbued with a deep commitment to making social and policy research methods accessible and meaningful *Research Methods in Practice* Strategies for Description and Causation motivates readers to examine the logic and limits of social science research from academic journals and government reports A central theme of causation versus description runs through the text emphasizing the idea that causal research is essential to understanding the origins of social problems and their potential solutions Readers will find excitement in the research experience as the best hope for improving the world in which we live while also acknowledging the trade offs and uncertainties in real world research

**Relationships Among the Family Incomes and Labor Market Outcomes of Relatives** Joseph G. Altonji, Thomas A. Dunn, 1991 This paper examines the links between the labor market outcomes of individuals who are related by blood or by marriage using panel data on pairs of matched family members from the National Longitudinal Survey of Labor Market Experience We examine the intergenerational and sibling correlations among a broad set of labor market variables using time average method of moments and regression techniques designed to reduce the biases introduced by transitory and measurement errors We also show that family data can be exploited to investigate theories of job turnover labor supply and the industry structure of wages Our primary findings follow First there are strong correlations between the family incomes of relatives Our method of moments estimates are 38 for brother pairs 73 for sister pairs and 56 for brother sister pairs The intergenerational family income correlations are 36 for father son pairs 48 for father daughter pairs and 56 for both mother son and mother daughter pairs These estimates except for the father son result are large compared to those in the literature for the U S Second we find strong correlations in the wages and earnings of relatives Wage correlations vary around 40 for all family member pairs and earnings correlations vary around 35 Work hours of family members of the same sex are also fairly strongly related Fourth we find strong correlations in the earnings of in laws that may support a theory of assortive mating in which parental earnings have value We also provide evidence that job turnover rates depend on family characteristics and are negatively correlated with labor market productivity Further we show that young men whose fathers work in high wage industries tend themselves to work in high wage industries Lastly we find that a father s collective bargaining coverage has a strong positive influence on his son s collective bargaining status
