Passive and Active Environmental Controls Dean Heerwagen, 2004
Written for architects, this title addresses how to design and construct buildings to satisfy occupants' physical and physiological needs. It serves as an introduction to the subject of environmental controls and presents information for schematic design of buildings. It demonstrates how each system is integrated with other building systems. **Heating, Cooling, Lighting** Norbert Lechner, 2014-10-13
Sustainable environmental control through building design. Heating, Cooling, and Lighting is the industry standard text on environmental control systems with the emphasis on sustainable design. By detailing the many factors that contribute to the comfort in a building, this book helps architects minimize mechanical systems and energy usage over the life of the building by siting, building design, and landscaping to maximize natural heating, cooling, and lighting. This new fourth edition includes new information on integrated design strategies and designing for the Tropics. Resources include helpful case studies, checklists, diagrams, and a companion website featuring additional cases, an image bank, and instructor materials. Designing buildings that require less energy to heat, cool, and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems. Basic design decisions regarding size, orientation, and form have a great impact on the sustainability, cost, and comfort of a building. Heating, Cooling, and Lighting provides detailed guidance for each phase of a design project. Readers will understand the concept of sustainability as applied to energy sources. Review the basic principles of thermal comfort and the critical role of climate. Learn the fundamentals of solar responsive design, including active and passive solar systems, as well as photovoltaics. Discover how siting, architectural design, and landscaping can reduce the requirements for mechanical and electrical systems. In sustainable design, mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself. With this in mind, designers require a comprehensive understanding of both the properties of

energy and the human factors involved in thermal comfort Heating Cooling and Lighting is the complete industry leading resource for designers interested in sustainable environmental control *Environmental Issues for Architecture* David Lee Smith,2011-02-16 This primer for architects explores the basic physical principles and requirements of every aspect of passive and active controls in buildings Avoiding needless jargon *Environmental Issues for Architecture* supports an understanding of environmental systems in order to inform architectural design With topics ranging from lighting acoustics thermal control plumbing fire protection and egress to elevators and escalators all of the latest technologies are supported Designer friendly this rich resource gives just enough technical information for architects to design buildings that are efficient and comfortable **Passive and Active Environmental Controls** Dean Heerwagen,2003-07 Written for architects this title addresses how to design and construct buildings to satisfy occupants physical and physiological needs It serves as an introduction to the subject of environmental controls and presents information for schematic design of buildings It demonstrates how each system is integrated with other building systems *Review* ,1986 *Information of the Institute for Lightweight Structures* Universität Stuttgart.
