Despite a plethora of techniques to analyse the financial performance of a business there has been no single methodology that has been overwhelmingly preferred by users This could be an indication that either the methods themselves are deficient or they are limited by other factors that are not easily overcome Unlike the current offerings in the field which focus on issues relating to business performance management or non financial aspects such as market efficiency satisfaction and workforce productivity this book offers a solution to a major gap in the literature and understanding for those seeking to measure analyse and benchmark the financial performance of any organisation for profit not for profit and government agencies It clearly identifies why current techniques fail proposes and evidences a solution that overcomes these issues by including two algorithms that can be combined to solve this problem and demonstrates the practical application of the technique to the benefit of users in order to pinpoint real performance levels and insights One of the largest issues this book will help to overcome is the inability to compare the accounts of businesses organisations from different countries that report in different currencies This technique eliminates the need for currency translations and the issues that arise with that process This book is an invaluable and practical guide to assist accounting and finance practitioners in measuring and comparing financial performance across firms with different business models different accounting policies and different scales of operations
