Corrosion and Corrosion Protection of Wind Power Structures in Marine Environments Andreas Momber, 2024-04-06

Corrosion and Corrosion Protection of Wind Power Structures in Marine Environments Volume 1 Introduction and Corrosive Loads offers the first comprehensive review on corrosion and corrosion protection of offshore wind power structures The book provides extensive discussion on corrosion phenomena and types in different marine corrosion zones including the modeling of corrosion processes and interactions between corrosion and structural stability The book addresses important design issues namely materials selection relative to performance in marine environments corrosion allowance and constructive design Active and passive corrosion protection measures are emphasized with special sections on cathodic corrosion protection and the use of protective coatings Seawater related issues associated with cathodic protection such as calcareous deposit formation hydrogen formation and fouling are discussed With respect to protective coatings the book considers for the first time complete loading scenarios including corrosive loads mechanical loads and special loads and covers a wide range of coating materials Problems associated with fouling and bacterial induced corrosion are extensively reviewed The book closes with a chapter on recent developments in maintenance strategies inspection techniques and repair technologies The book is of special interest to materials scientists materials developers corrosion engineers maintenance engineers civil engineers steel work designers mechanical engineers marine engineers Offshore wind power is an emerging renewable technology and a key factor for a cleaner environment Offshore wind power structures are situated in a demanding and challenging marine environment The structures are loaded in a complex way including mechanical loads and corrosive loads Corrosion is one of the major limiting factors to the reliability and performance of the technology Maintenance and repair of corrosion protection systems are particularly laborious and costly Explores the literature between 1950 and 2020 and contains over 2000 references Offers the most complete monograph on the issue Covers all aspects of corrosion protection in detail including coatings cathodic protection corrosion allowance and constructive design as well as maintenance and repair Delivers the most complete review on corrosion of metals in marine offshore environments Focuses on all aspects of offshore wind power structures including foundations towers internal sections connection flanges and transformation platforms

Acceptance of Stay Cable Systems Using Prestressing Steels fib Fédération internationale du béton, 2005-01-01 This fib Recommendation gives technical guidelines regarding design testing acceptance installation qualification inspection and maintenance of stay cable systems using prestressing steels strands wires or bars as tensile elements which can be applied internationally This Recommendation is applicable for cable stayed bridges and other suspended structures such as roofs It may also be used for hangers in arch structures and as suspension cables as appropriate This Recommendations has been formulated by an international working

group comprising more than 20 experts from administrative authorities universities laboratories owners structural designers suppliers of prestressing steels and stay cable suppliers The text has been written to cover best construction practices around the world and to provide material specifications that are considered to be the most advanced available at the time of preparing this text For ease of use for client designer and cable supplier the complex content has been arranged thematically according to the system components into chapters focusing on performance characteristics requirements and acceptance criteria Requirements and comments have been specified for all parties involved in design and construction in order to aim for a uniform and high quality and durability The interfaces to the structural designer are highlighted The essential subjects are Design and detailing of stay cables including saddles and damping devices Durability requirements and corrosion protection systems Requirements for the materials Testing requirements for the stay cables Installation tolerances qualification of companies and personnel Inspection maintenance and repair This Recommendation does not cover the technology of stay cables whose tensile elements are ropes locked coil cables etc or which consist of composite materials Nevertheless in many cases the specified performance criteria may also be applicable to these systems although numerical values given for the acceptance criteria may need to be adjusted For these systems it has been difficult to provide multiple protective layers similar to those specified for stay cables made from prestressing steel and therefore the quality of corrosion protection may not be equivalent While extradosed cables have similarities with stay cables generally agreed design and system acceptance criteria are not yet available and therefore this type of cable is not covered
