Fuzzy Logic G. Gerla, 2013-03-09 Fuzzy logic in narrow sense is a promising new chapter of formal logic whose basic ideas were formulated by Lotfi Zadeh see Zadeh 1975 a The aim of this theory is to formalize the approximate reasoning we use in everyday life the object of investigation being the human aptitude to manage vague properties as for example beautiful small plausible believable etc that by their own nature can be satisfied to a degree different from 0 false and 1 true It is worth noting that the traditional deductive framework in many valued logic is different from the one adopted in this book for fuzzy logic in the former logics one always uses a crisp deduction apparatus producing crisp sets of formulas the formulas that are considered logically valid By contrast fuzzy logical deductive machinery is devised to produce a fuzzy set of formulas the theorems from a fuzzy set of formulas the hypotheses Approximate reasoning has generated a very interesting literature in recent years However in spite of several basic results in our opinion we are still far from a satisfactory setting of this very hard and mysterious subject The aim of this book is to furnish some theoretical devices and to sketch a general framework for fuzzy logic This is also in accordance with the non Fregean attitude of the book
